
The Secret Mountain holds all the Secrets of the Future Temple

Author : Meiliken

Date : 14-11-2009

There is a secret mountain of stone more precious than anyone ever realized. As previously advised the secret cubit to be utilized in the construction of the Future Temple (The Third Holy Temple) has been used before, thousands of years ago. It was concealed and persevered for thousands of years. It was even buried under sand for multiple millennia, yet it resurfaced a couple hundred years ago, and was only properly deciphered in the last 20, and completely hidden until today.

As you read the following article, keep in mind that Abraham Avinu went down to Egypt: Jacob and all his sons and family moved there; Joseph ruled over Egypt; and the Arizal grew up there. These were the most powerful *tzaddiks*, all of whom could easily control the weather, do you really think they were forced down there because of droughts and circumstances?

Yes, here we go with numbers again, but they represent energy and we need them to reveal the secrets hidden beneath them—think of them as symbols in a giant cosmic puzzle that we're piecing together—and if they're not your thing, just get a feel for the story they are telling, and let their spirit guide you to a further state of awe, as we draw back the veils on the tree-of-life reality.

As promised there is a monument made out of stone, actually an enormous one, and if it wasn't built by G-d himself, as you will soon witness, it was certainly built with the dimensions He must have supplied. Like the Torah, it is precise beyond comprehension and certainly beyond the capabilities of man thousands of years ago. Yet, like the Torah, there it is for all to see and study.

This monumental monument is designed with 3 standard measurements: the inch, the foot and the ancient and future cubit (27.5 inches), as explained in our previous article regarding the Future Temple. It also has a few standard dimensions because of its special shape: its height, base (width), apothem, and perimeter of its base. And with those very few simple dimensions of wealth of beauty and ancient and modern knowledge was concealed, or shall we say preserved. Let's start with the standard measure of its base (width), which is **756.25** feet long. That's long. It's huge actually, but we're more concerned for the moment on what it could mean.

Hieroglyphics aren't going to help us here. Fortunately, we have gematria, the same gematria used by our Patriarchs. And as it just so happens, the Hebrew letter *Nun* (*N*) in the more potent gematria milui (spelled-out) sofit version (spelled *NVN*) is **756**. And reflecting on the letter *Nun* (*N*) we know that its ordinary value as a single letter is **50**, which kabbalistically always represents the *sefira* (dimension) of *Binah* (understanding) and always refers to the **50**-year jubilee cycle as designated in the Torah in the counting toward the arrival of *Moshiach* (the Messiah) and the *geula* (final redemption).

756 is also the gematria value of the Hebrew word for "the years of" (*ShNVT*), reinforcing this counting of years, and the ordinal value of the word is **63**, that of *Sag*, the aspect of G-d's Name associated with *Binah* and presented by the letter *Samech-Gimmel*, (**SG**) as in the two Hebrew letters Abraham advised us control the destiny of the month of Kislev (*Sagittarius*).

And similarly, the height of this monument is **481.25** feet high, not only towers 48 stories over

the desert below, but matches up with the Hebrew word for year, *Shanah* (*ShNH*), which likewise when taken in its more potent gematria milui (spelled-out) value (*ShYN NVN HY*) gives us **481**.

So while “year” and “**50**” seem to go together beautifully in the concept of the critical “jubilee year” concept, simple arithmetic gives us $(756 - 481) = 275$, which, if you recall from our article on the derivation of the ancient and future cubit, was the total value of the Tetragrammaton in its full form, encompassing all four aspects, which collectively totaled **232 + 39 letters + 4 Names = 275**. And since $275/10$ *sefirot* = **27.5**, the secret measure of the Holy cubit, **27.5 inches**, was dictated by the Holy Name of G-d itself. Please understand this well, for as the *Ramchal* explains, the four expansions of the Tetragrammaton (YHVH) have such “great holiness [that] their power is limitless. All existence is bound to them from beginning to end.”

So we have this divine bond between **756** and **481**, or alternatively between the letters *Nun* (50) and *Shanah* (years).

Please keep this connection in mind as we explore this monument that predates the Exodus from Egypt and has until now defied true understanding of its purpose and importance to all but a few tzaddikim.

We’ll call this monument Joseph’s ladder, or Joseph’s Pyramid and its name will become clearer as we analyze it further. The world knows it as the Great Pyramid of Cheops (Khufu), which has helped to conceal its true import—except to tourism of course—but all that will be explained soon enough.

If you’re wondering what this pyramid has to do with the Future Temple of Kabbalah, be patient.

As we said, the standard base measurement of the pyramid (actually the South base, since all four are slightly different, yet extremely precise for very specific reasons we’ll go into later), which is exactly **756.25** feet wide, and the exact height of the pyramid is precisely **481.25** feet tall. So yes, the basic measurements of the pyramid ($756.25 - 481.25 = 275$) give the exact dimension of the ancient and future cubit in terms of the Divine Name of G-d.

There’s so much more, but before we get deeper, let’s stop and examine closer the Hebrew letter *Nun* (*NVN*) spelled out and see that its gematria milui value (50+6+50) is **106** and that the **4** letter *Nuns* (*NVN*) that represent the **4** bases of the pyramid add up to $106 \times 4 = 424$, the exact numerical value of *Moshiach Ben David* (the Messiah).

The number **4**, as in the **4** sides and the **4** letters in the Tetragrammaton (YHVH), in Hebrew is represented by the letter *dalet* (*D*), and as we said, the number **50** is represented by the letter *Nun* (*N*). Together, they represent the combination *DN*, which Abraham, the Patriarch, informed us in his *Sefer Yetzirah*, are the letters that control the destiny of the month of *Cheshvan* (Scorpio) and moreover, they are directly connected with the revelation of *Moshiach*. But we’ll explain that in depth in a separate article.

Now, the **4** sides of this pyramid could very well represent the **4** Letters of the Tetragrammaton (YHVH), after all the secret entrance to the pyramid was located **55** feet off the ground with a futuristic YHVH engraved over it—odd if an Egyptian pharaoh was the architect or builder, don’t you think—but the **4** sides could also represent the **4** exiles, starting with the one in Egypt that began with Joseph and lasted **210 years**.

Now, there might be more to that than you think. Remember the height of the pyramid is **481.25** feet, the same as the gematria (**481**) of the Hebrew word for years, and **481.25 feet = 210 cubits**, which is also the same as the exact number of levels of stone in the pyramid, **210**.

Please note, that the number **210** in Hebrew counting is comprised of the letters, *Resh* (*R*) and *Yud* (*Y*), the two letters that Abraham Avinu advised controlled the destiny of the month of *Elul* (Virgo).

Obviously, the height of the pyramid could very well mark the **210 years** of the Israelite exile in Egypt.

But the height of the pyramid may reveal something else as well, because **481.25** feet is also **5775** inches, or in terms of years, **5775** would be the year 2015 CE and **3** years shy of the date given to us by Rav Ashlag and marked by the Divine Calendar, etc for *Moshiach* and the *geula*: **5778**. (See [The Divine Calendar](#))

Of course, if you recall from our article on the derivation of the cubit, the measure of 27.5 inches can also be derived from the harmonic structure of the number **3** itself, so critical to the physical and spiritual structure of our universe, thus adding 3 to 5775 would not be out of hand.

For reference only: $3 = ? 27.5/10 + ((-1)^{(n-2)} 27.5)/10^{(n+1)}$ where $n=1??$, and therefore, **5778 = $210 * 27.5 + ? 27.5/10 + ((-1)^{(n-2)} 27.5)/10^{(n+1)}$ where $n=1 ? ?$.**

The alternating harmonic convergence sequence in standard notation:

$$? \\ ? x + (-1)^{n+1}(x/10^n) \\ n = 1$$

And if that doesn't convince you—or at least numb you—please note that there was a capstone on the pyramid—long since missing—of **3** levels (cubits) in height, just as the **3** upper *sefirot* (are above) the other 7 bundled together. Moreover, without that separate capstone, depicted on the US dollar bill as a hovering eye above the truncated pyramid, the pyramid is only **207** level/cubits high and **207** is not only the numerical value of the Hebrew words for Light (*Or*) and Secret (*Raz*), but is comprised of the letters, *Resh (R)* and *Tziona (Tz)*, the two letters that Abraham Avinu advised controlled the destiny of the month of *Sivan* (Gemini).

Also in conjunction with the number 3, that little .25 ft tagged onto the **481** and the **756** height and base measurements is exactly **3** inches.

But if you really think about it, the **210 cubit/levels** in height and years only marks 1 of the **4** exiles, leaving **3** more to be defined to complete the prescribed **5778** years from Adam to Mashiach

The entrance to the Pyramid was originally hidden several feet behind a slick, steep, and thick limestone encasing and was **55** feet off the ground. That **55** is precisely **2 x 27.5** is yet another reference to Abraham's description of the structure of the universe at the beginning of his *Sefer Yetzirah* in that 5 on one side, 5 on the other, unified, and split down the middle is a graphic way of illustrating the numerical expression **55/2 = 27.5**

So to recap, the most basic measurements of the pyramid could not only have been concealing the exact measure of the cubit needed for the construction of the Third Temple, but indeed could be spelling out the end of the period of exile in **5778**, much as it did **3330** years ago with the end of the **210** years of Egyptian exile.

This could all be conjecture, of course, but the **4** letter (*NVM*)s of the **4** bases did add up to **424**, the numerical value of *Moshaich Ben David* and the **4** bases in inches (9075) do form a perimeter of **36,300** inches with **363** being the numerical value of *H'Moshiach* (The Messiah), and also of the **6** odd letters (*BYH ShMV*) that begin **6** of the 248 columns of the Torah—the rest being all *vavs* of numerical value **6**—and which spell out “In the Name of G-d (YH).”

And if you think that's coincidental, please note that the measurement of that same South base in cubits is exactly **330** cubits and **330²/3 = 36,300** as well.

Or that **756 x 481 = 363636**.

Now, with the hint of the end of the **4** exile periods quite clear, we turn to the measure of the pyramid's apothem, an imaginary line drawn down the center of the South face of the pyramid, and we get a measurement of **612** feet, the numerical value of the Hebrew word *Brit*, meaning **Covenant**.

As for the 4 letter word *Brit (BRYT)*, while the **Covenant of Abraham** was in **2018 HC** and **5778** is also **2018 CE**, the sum 4 full aspects of word give us: the gematria milui value plus its standard value plus its ordinal value plus the *kolel* of the 4 letters = **1348 +612+ 54 + 4 = 2018**. And let's not forget that **54** is the sum of *Dalet* and *Nun (DN)* as explained above. From here, the analysis of the pyramid's structure and dimensions get deeper and the meaning of their revelations more profound, including their connections and similarities to the future Temple, and their precise and startling insights in our most modern physics. But we're going to pause, give you a breather, and split up this article into digestible components, but before we do, we want you to step back and to picture the enormity of what you've just read. Picture yourself standing at the foot of this mountain, towering a steep 48 stories above you, made up of 6 million tons of limestone and granite blocks, some weighing up to 50 tons each, and take in that it was assembled thousands of years ago with an amazing precision rivaling NASA today, and that all its measurements to a fraction of an inch detail a prophecy of the coming Moshiach and of the end of the 4 exiles, yet it was built long before the first exile ended. Make no bones about it; this is a mountain; it is the mountain. It stands **210** levels and **210** cubits high and the gematria of "the mountain" (HHR) is **210**. Ask yourself how? Ask yourself why? Was it just to conceal and yet preserve in stone the measurement of the ancient and future cubit? After all, that base measurement of the South face of **756.25** feet is not only two and a half football fields in length, but is also exactly **27.5²**. So yes, that is one very important reason. And after the Tower of Babel—the only other time the Torah mentions the word bricks besides in conjunction with the Israelites work in Egypt—maybe there was very good reason to conceal the cubit until now. And in terms of preserving it, I can tell you this, had it not been preserved in the measures of Joseph's Pyramid it *would* have been lost forever, and you would not be reading this article. There's much more to follow, and remember this is only still part of our first step in exploring the construction of the Future Temple. With each step the energy increases and we get closer to the tree-of-life reality. Shavua Tov
