
Chapter XXXII Part J – The Journey Continues with The Hall of Mirrors

Author : Meiliken

Date : 09-04-2021

Deeper into the Valley of the Ratios

[Do not proceed unless you have read at least Chapter 32, Spherical Time.](#) If you are ready, a whole new world awaits. The [Journey begins here](#) if you missed it. Parallel to the Valley of the All-Inclusives and of the Cumulative Triangular Numbers is the Valley of the Ratios. It too is full of ziggurats, and in this valley they represent the sum of the ratios through n in the equation:

$$f(x) = \left(1 + \frac{x-1}{2}\right) * \left(1 + \frac{x-1}{3}\right) * \left(1 + \frac{x-1}{4}\right) * \dots * \left(1 + \frac{x-1}{n}\right)$$

For the 4th rank or 4th ziggurat that we encounter, the sum of those ratios are 1 – 3 – 7 – 14 – 25.2 – **42** – 66 – 99 – 143 – 200.2 – **273** – 364 – 376 – 612 for the first **14** levels.

It is interesting that both **42** and **273**, the harmonic convergent that relates the inscribed circle to the square, are there together as they are one of the factor pairs (**42 x 273**) of the land mass of Israel.

The floor is shaking, and we sense something is coming.

$$1 - 3 - 7 - 14 - 25.2 - 42 - 66 - 99 - \mathbf{143} - 200.2 - 273 - 364 - 376 - 612$$

The 9th level is **143**, one of the 3 aspects of the Name, *Ehyeh* (????????????) that we saw woven into the Triangles and their cumulative sums.

$$1 - 3 - 7 - 14 - 25.2 - 42 - 66 - 99 - 143 - 200.2 - 273 - \mathbf{364} - \mathbf{376} - \mathbf{612}$$

The 13th and 14th levels represent the peace of Spiritual Time (**376**) and the Covenant (**612**), the 12th level, **364** is **14 x 26**, the *YHVH* (????).

Everything is shaking.

$$1 - 3 - 7 - 14 - 25.2 - 42 - 66 - 99 - 143 - \mathbf{200.2} - 273 - 364 - 376 - 612$$

The product of the 4 ratios on the 10th level, **200.2**, is at first odd, and then it gets odder not just

because the sum of the rank 4 cumulative triangles at level 10 are 2002, but because the inverse of 200.2 is .00499500, representing the sum of the 27 Hebrew letters (4995).

1 – 3 – 7 – 14 – 25.2 – 42 – 66 – 99 – 143 – 200.2 – 273 – 364 – 376 – 612

All the connections to 14, especially at the center of the 27 positions/letters of the Essential Cube of Creation, are obvious, and 252 is 6 x 42.

The ziggurats are thumping. Two angels yell at us to run, to seek higher ground. They appear, at least within our consciousness, to be Michael (?????) and Gabriel (?????).

1 – 3 – 7 – 14 – 25.2 – 42 – 66 – 99 – 143 – 200.2 – 273 – 364 – 376 – 612

The 3 – 6 – 9 aspect is incorporated in (99 – 66) = 33.

A fierce storm brews overhead, and dark bulging spiraling clouds cover the top of the ziggurats.

There is an eerie sensation that everything is about to be purged. The winds pick up, a sucking heat rising off the desert floor.

When the Triangle levels reach 26, the product of the ratios is 5481, whose inverse is .000182448. Jacob (182), 18, and the pivotal year 2448 HC tied to the YHVH (????).

Over and over again, we hear the words, “The purge is coming.”

As we mount a ziggurat, seeking higher ground. It yells at us to get off. The angels, arms stretched skyward, yell, “Climb the valley walls, hurry.”

Within the dark undulating clouds, we make out flying crafts landing on or hovering on top to the ziggurats. They are right above all the trigger points, hiding within or maybe generating the clouds.

With lightning streaking and cracking incessantly within the pulsing darkness above, we race up the steep embankment. Peering over our shoulders, curious yet fearful to become pillars of salt, we see that the limit of those inverses of the products of the ratios is 1.6666 or 10/6, the inverse of *Zeir Anpin* (6).

Huh?

The ziggurats plunge or are pushed and shoved downward in a thunderous roar. As they do, an ominous sea rises up over the valley, surged upward by the downward pressure. When the giant plungers descend all 107 levels, the sea rushes up in a series of violent heaves, covering them and everything else. When it settles, everything is covered by 15 cubits.

Everything has been purged. This is not our word; it is what the inner cosmos have told us. The great reset has begun.

It is then that we realize that the 107 cubits of the Triangle mountains plus the 15 cubits that

cover them equal **122** cubits, as in the **122** words of the *Shema*'s middle paragraph. It is also then that we recall that it was the **42**-Letter Name and the **72** Names (Triplets) that Moses used to pull the sea apart. Is the *Shema* just a metaphor for the splitting of the sea, or a powerful tool we can use to split it ourselves when the time comes?

There was one bit of land that the sea could not or would not cover: the **11466** square miles of Israel, (**42** x **273**) square miles.

$$2(5778) + 90 = 11,466$$

$$2(5778) + \text{מ"ח} = 11,466$$

So grateful that this was just a demonstration, our collective fear of the real great reset makes us shudder, and we decide we must learn as much as possible to prevent it, or at least to ascend our consciousness before it does. Like the impending pole-shift and the upcoming solar disaster it appears to be overdue.

The Hall of Mirrors

The sea receded from the valleys and everything was cool and blue again, and the ziggurats were back in place, though no longer scraping the sky. We climbed back up the first Triangular ziggurat **10** steps up to get a better perspective of the patterns sketched out around us and to see if there was a doorway or portal to another area anywhere to be seen. When we reached that cumulative (1- **10**) level of **55**, a crisp luminous stream rose up to meet us and beckoned us to jump in.

55

Within the stream of **55**, we learn that **55** is not just or **2** cubits. Spelled out in Hebrew words **55** is a **10**-letter expression (????????????), or "**50** and **5**," and in gematria it is (**408** + **6** + **348**). Before we can even do the math, we are sent spiraling and tumbling down new corridors of luminosity.

In creating this system of translation/transformation, the Creator gave us an entrance to multiple pathways and enormous amounts of information derived from simple numbers that can only be fully explored in hyperspace.

Through a clear mirror (????????????????) we see that the final letters *Shem* (??) are duplicated in each word. Within the word for **5**, we find *Shem* (??) build into "His Name (??)," while the word for **50** (??????) splits into *Shem* (??) and *chaim* (????), life as in the Tree-of-Life.

Through another we see that the initials (??), **6** and **8**, total **14**, and the final letters, spelling *Shem* (??), thus the **4** letters with the *kolel* equal **358**, *Moshiach*. Another clear mirror digs

deeper, showing us that these are also the same two letters (??) that add up to **14** and that are found in the middle of the expression fifty-five (????????????), right in the middle of the permuted word heaven (????), backwards and forwards.

The clear mirrors have coalesced into an entire hall surrounding the expression for **55**. Thanks to another one, we realize that the value of the word (??????) for **50**, which is **408**, when multiplied times the Vav (?) between the two words in **55** (????????????) is $(408 \times 6) = 2448$, the pivotal moment in Spherical Time.

Next, we are shown that the first 4 letters in (??????) spell *Moshiach* (????). This also means that there is a second *Moshiach* (????) spelled out in **55** (????????????). The two letters (???) left out between the **2** *Moshiach* (????) add up to **46**, as in the numerical value of “cubit,” which brings us back around to **2** cubits = **55**.” So, **55** and (????????????) split down the middle give us **2** cubits and **2** *Moshiach* (????). Is this yet another hint to the **2** *Hei* (??) in the *YHVH* (????) that total **55**? Or to what awaits us on the other side of those Gates?

Within Time

Since we already know that the Creator has made it clear to us that **55** is associated with an entrance way, and that **50** is associated with *Binah*, we proceed toward an open plateau upon which the Future Holy Temple glows. Our attention is drawn to the ten **10**-cubit wide, **50**-cubit high Gates of the Holy Temple.

Distracted by the particular letter *Hei* (?) of numerical value **5** within the first **42** letters of the Torah that is known as a secret gateway, we pause, attempt to approach, but then we choose or are guided not to enter.

Instead, we are drawn back to the gematria values within the expression fifty-five (????????????) of **408** and **6**, and their reflection of the **50** component letters used to construct the Torah, which form the $(600,000 - 408)$ total component letters in the Torah. Realizing how space expands in hyperspace, we keep in mind that **600,000** is also (6×10^5) . A swift corridor through the hall of mirrors pulls us through to the Spherical Time vortex where we see $(6 \times 408) = 2448$, yet again.

Through another clear mirror we then see that the words (????????????) broken down into (??????) x Vav (?) is numerically $(50 \times 6) = 300$, the height of the Core Equilateral Triangle. Through the **2448** time tunnel we see the **600,000** men, standing to be counted and receive the Torah, in the year **2448** HC.

In the mirrored sides of this tunnel are reflected the first **8** letters in fifty-five (????????????) and they have the gematria **422**, which is the numerical value of the word “seventy **70**.” It is also **430** when the **8** is added as the *kollel*, representing the **430** years from **2018** to **2448**, the years of exile as the described in the Torah. Another clear mirror shows us that the first **8** letters that total **422** and reflect **70** (?) plus the final two (??) in the **10** letters of the full expression spell

Shema (???) , the first of the **15** Triplets of the *Shema* (???) . Everything seems to connect to the *Shema*, but it is not surprising as the **248** initials in the *Shema* incorporated the value **55** more than once.

The clear mirrors guide us further along. The standard numerical value of **50** (??????) is **408**, and the ordinal value of “and **5** (????)” is **48**, both allusions to the pivot year **2448** and to the cube of **48** whose side/edge is **3.63424**, the result of the Spherical Time equation. Now we see that the product of the 4 letters in “and **5** (????)” is **576,000**, a possible reference to the year **2000** CE and to the **(600,000 – 576,000) = 24,000** Israelite Men who died in the plague for their participation in the Golden Calf in **2448**, just like the **24,000** men who later died in a plague for their sins with the Midianite women.

With the values in the expression **55** (???????) broken down and then multiplied together, we get **(50 x 6 x 5) = 1500**, the highest word value in the Torah and the product of the *YHVH* (????).

Surrounded by mirrors with nowhere to go, we find ourselves in another chamber filled with men in white robes and long beards who ignore us. They speak telepathically and we can hear them though they reverently listen to one speaker at a time. We listen too. I do not know if it because of the **2** *Moshiach* (????), the **2** *Hei* (??) or even the two **5**'s in **55**, but we hear the strange tale of the two wands.

Chamber of the Two Wands

I do not know if the wands at one time were Harry Potter style, or if they were like the ones Jacob used with Laban's livestock, but today they are modern/futuristic curved with a blue luminous light emanating from both the concave and the convex sides. The handle is black. In actuality, there is only one wand, but two sides of it. One side slashes; the other soothes. When the wand is waved the entire universe changes. We see it waved by someone within the physical realm and also over a glowing web of a globe. In the physical realm everything shifts. In the glowing blue globe lights flick on and off in a wave as the wand passes over it. Whoever wields the wand resets or sets the universe in a way that suits them and gets out of any predicaments they may be in. A second more knowledgeable user, utilizing the back of the wand, must then come along and soothe things over, repairing the mess the first user caused. We see the scenario played out multiple times, until we are sure that this is how it always is. The question is asked in the chamber: If the first user could have chosen any version of the universe he wanted, why did he choose such a flawed disastrous version? Why do they always choose that path and version? Why is it always a slash job?

11 Generations

The chamber and its members are gone, and we are back within the mirrors. There was no mention of who gets to wield the wands, where they found them, or whether they were found in the physical realm or beyond the simulation. There is a cross-corridor within the hall of mirrors that leads a central junction. In it, we are shown us that the gematria of fifty (??????) and of five (???) together is **756**, as in **27.5²**, the base of the distant illuminated encasing pyramid around the Tower of Truth. Yet another passage opens to the Chronicles of Shem (??), where we see that of the ages of the **11** generations from Shem to Isaac (**100 + 35 + 30 + 34 + 30 + 32**

+ 30 + 29 + 70 + 100 + 60), the **7** inner ones total **220**, while the first one and the final 3—four (**4**) in total—sum to **330**, as in the **330** cubits that are equivalent to the **756** ft in that illuminated base. We are further shown that **330** equals **55 x 6**.

Yet another clear mirror shows us that while $55/11 = 5$, the sum of those **11** generations is thus $(220 + 330) = 550$.

Moreover, the **756.25'** base measurement, which is the sum of the words “fifty” and “five,” when divided by **55** is $756.25/55$, or **13.75**, the Phi (?) angle of rotation. It finally dawns on some of us that we do not need an actual pyramid; all we need are the Hebrew words and a bit of understanding. It is a nice touch to include it in the physical world as a reflection from above. As it says in the Zohar about Moses, what one “sees” depends on how clear the mirror is that one is looking into. Most of the mirrors in the physical world are not transparent at all; they only reflect back one’s own image of themselves.

It is then that we see that $(756.25 - 550) = 206.25$, as in the Royal Egyptian Cubit (**20.625"** or exactly $\frac{3}{4}$ of the Sacred Cubit (**27.5"**). We last saw this cubit utilized only a few chambers ago in the expression of $(161.5 \times 20.625") = 3330"$, representing the **66.6** jubilee years between **2448** and **5778**.

Planck’s Constant

The mirrors start self-reflecting, and we see tinier and tinier versions spinning around until they get all the way down to the Planck length, the smallest unit our physicists tell us is possible. Obviously, we are being shown a blown up version of this length. The Planck’s Constant is the relationship that a photon can carry to its frequency. It is the limit of physics. It is the limit of uncertainty in Heisenberg’s Uncertainty Principle, which is determined by Planck’s Constant within a sine wave. We are informed that this is not going to be a physics lesson because that pertains to physicality. We are also instructed that the Creator has no limits, nor any degree of uncertainty. Moreover, the more certainty we have in the Creator the closer we get to Him and the closer we are to freedom. The Planck’s Constant (h) is $6.62607015 \times 10^{-34}$ Joules per second. It is just a number beyond which man cannot conceive. Perhaps it is the limit to the scale of the physical simulation. It is at the heart of most of our physics and forms another constant in the Heisenberg’s Indeterminacy Equation and that is the uncertainty of position times the uncertainty in momentum is greater than or equal to $h/4$?. This is very important to physics, and it works out to 5.272859×10^{-35} Joules per second. A very tiny number indeed.

What we are shown next makes sense to only a select group of people on this Earth today, actually to have ever existed within this **5778** years of simulation, so we need to ask ourselves why? It was not put there to impress us, so it must be another key. Moreover, it must be a key that we can use or there is no sense creating it.

Within the equation the number **4** is the periodicity of the sine wave so if we want to take it out of the equation, we simply multiplying both sides by **4** to get $4 \times x \times p = h/?$. This also gives us a number directly in proportion the Planck’s Constant (h) and Pi(?). The resultant number for $h/?$ is: **21.0914362859** $\times 10^{-35}$..., the height of the Tower of Truth (**210**) and (**9143**) the sum of the **72** Triplets, which we found embedded in its encasing pyramid base square.

Of course, if a circle had a circumference of the Planck's Constant (h) then its diameter would be **21.0914362859** x 10^{-35} , and whether this is meaningful or not, **21.0914363** x 10^{-35} includes *H'Moshiach* (**363**). Does this mean *Moshiach* is in the Planck's constant, or more likely that the Light of *Moshiach* is found in even in the smallest aspect of our world?

We have seen Planck's Constant before with the fine structure constant and the secret of **42** and **11/3000**.

A few painful images appear in the clear mirrors to refresh our memories:

$$\alpha = \frac{e^2 \hbar c}{4\pi\epsilon_0} = \frac{\mu_0 c e^2}{2h} \quad \text{or} \quad \alpha = \frac{e^2}{4\pi\epsilon_0 \hbar c},$$

where e is the charge of an electron; where $\hbar = h/2\pi$ and is known as the reduced Planck's constant; where $\epsilon_0 = 1/\mu_0 c^2$ is the electric constant (the permittivity of vacuum, also known as free space); where μ_0 is the magnetic constant (the permeability of vacuum); and where c is the speed of light. This constant is proportional to the square of the coupling strength of the charge of an electron to the electromagnetic field.

Since:

The fine Structure constant is:

$$\alpha = \frac{1}{4\pi} g^2$$

The Gauge coupling parameter (g) is:

$$\frac{e}{\sqrt{\epsilon_0 \hbar c}} = \sqrt{4\pi\alpha} \approx 0.30282212$$

The clear mirrors are highlighting the **4?** component in these equations in bright purple for us.

The clear mirror is now showing us that this all relates to the Core Triangle of His Name. It begins by showing us that the small gematria of the **42**-Letter Name is **173** and that $1/42 \times 1/137 = .000173\dots$ It then reminds us that (**42** times the Fine Structure constant minus the coupling constant) or (**42/? - g**) = (**42/137.03599 - .302822131**) = **.0036666\dots = 11/3000**. It tells us that we are now ready to comprehend that the inverse, or **3000/11**, is **272.72727**, which reflects the endless **27** positions and the **273**-component in the same Core Triangle of His Name.

Another clear mirror brings us back to the **600,000** men and component letters standing at Mt

Sinai in 2448 HC. It reminds us of the lineage equation the Arizal taught us long ago: **600, 000/70/12/3 = 1/42.**

At once, the clear mirrors shift gears and show us Spherical Time equations, starting with the formula based on the surface area ($4\pi r^2$) of the two spheres. Given that the two radii **2018/2 + 3760/2** add up to **2889**, the midpoint in King David's life, we original formula reduces to:

$$4\pi (2889)^2/2889 = 36304.24470$$

Which then reduces to:

$$4\pi (2889) = 36304.24470$$

Once again **4?** is illuminated in bright purple.

The next clear mirror shows us $h/2$ is the circumference of a sphere with a diameter of h and a radius of $h/2$. It then combines the two series of equations concerning the Planck length sphere and the Spherical Time bubble. It divides $h/2$ or **21.0914362859** x 10^{-35} by **2889** to get $h/2889 = .0073006010... \times 10^{-35}$ or **73.006010...** x 10^{-31} , or *Chochma* of numerical value **73** that represents the Torah's first verse and so much more.

The clear mirrors do not stop there. They show us that following the Spherical Time Equation for the surface area, and thus dividing Planck's Constant (h) by **2889** gives us $h/2889 = .022935514... \times 10^{-35}$ or **2.2935514...** x 10^{-33} which is similar to the harmonic cubit relationship **27.5/12 = 2.291666**. One more image shows us that **2h/5778 = 2.2935514... x 10⁻³³**.

We realize these are not exact numbers. They are relationships, which is important in every reality. We also realize they are only off by only .000**18848** with **18** being the square of **4.2426** and **848** being (**2 x 424**.) Like Pi and Phi, Planck's constant is not a particle; it is a relationship, possibly another field designed to interact with the rest of the fields that define existence.

The Planck scale is indeed tiny but no less important to the Creator than the cubit, foot, inch, mile, or AU. Something tells us there is more to the story than this though, but we have probably absorbed as much as our Planck size consciousness can handle for now.

We tend to think of our consciousness as some big expansive array, but that is what our egos would like us to think. What the inner cosmos are showing us is that we are tiny particles in the giant consciousness of One. They are also showing us that we are still important and that a lot of effort is being expended to nurture us. Moreover, even the smallest of conceivable particles or measures, be it time or length. Has the spark of life (**18**) and *Moshiach* (**424**, **363**) and the Name of G-d, *Ehyeh* (**21**) in it. All is connected as One. And what we see on the grandest of scales, planets and stars, we also see in the humblest.

11 Initials of 10 Plagues

Everything rushes back to normal size, at least from our perspective, though we only seem to be along for the ride—the universe is doing all the heavy lifting. For all we know, we could be standing in one place while someone sweeps a wand high over our heads. Now, with the **11** initials of the *sefirot* (????????????) illuminated alongside the **11** patriarchal ages of the **11** generations found in the Torah in Chapter **11**, their mutual connection to (**10** x **55**). With both sets equaling the sum of **550**, a passage opens for us to the **10** plagues.

More specifically, it opens to the **11** initials (????????????) of the **10** plagues, which sum to **541**, Israel. Their ordinal value totals **100**, and the last 2 initials (??) of the final plague, the death of the first born, equals **42**. The last three (???) , which adds the plague for eternal darkness to the first born, equal **50**. They have a complete value of **73** as in *Chochma*, which comes up glowing yet again.

By holding up the clear mirror, the contrast and juxtaposition given in the Torah by the structure of the plagues could not be starker. *Zeir Anpin*, *Binah*, *Chochma* and *Israel* versus death, darkness, and constriction in Egypt. The value difference between Israel and Egypt is **161**, that of the highest level of the highest Name, *Ehyeh* (????????????). Israel and Egypt as concepts are polar opposites, physicality versus Spiritual Time. In one sense, the saga of the Israelites in Egypt was a cautionary tale of how even those on the highest track toward ascension can fall into the trap and trappings of physicality. The plentiful food, wealth, honor, and apparent freedom squeezes out the spiritual openings and turns into slavery and tyranny. Only acts of God can save them and lift them back up. Even so, it took another **40** years to burn off the stench of Egypt (physicality). Before they settled in Egypt, Joseph gave his brothers a taste and warning of what was to come. Later, Moses would warn Pharaoh what would happen and that his son would die. Of the many correct interpretations of the reunion narrative, one appears before us in the clear mirror. He wined and dined them, then imprisoned them on fake charges and tasked them to do his work for him, to bring Benjamin and draw in Jacob. In the **45th** Chapter Joseph let his emotions out, the reunion happened, and Pharaoh and Egypt sucked them in. The numerical value of Pharaoh (????) is **355**, as in *shannah* (year), referring to the paradigm of Time, physical time. The reason it took **10** plagues to overcome the grip of Pharaoh (????) is that his numerical value (**355**) is the same as *sefira* (????), as in the **10** *sefirot* of the Tree-of-Life. Looking deeper into the clear mirror we see that (**10** x **355**) = **3550** and that Pharaoh's grip lasted for **210** years, giving us (**10** x **355**) + **210** = **3760**, the radius and years of Spiritual Time.

One more image shows us that $2h/5778 = 2.2935514... \times 10^{-33}$.

Another shows us that $27.5/12 = 2.29$

And yet another shows us that Pharaoh (????) or (**80** + **275**) in small gematria is **8275**.

Another shows us that **210** or the letters (??) is inside *sefira* (????), as in *h/?* is: **21.0** $914362859 \times 10^{-35}$. But then we see that this is not uncommon. There is on average nearly one word in every verse of the Torah that contains (??), exactly **5645** times in **5845** verses, exactly **200** times less from a perfect 1:1 correlation. Indeed, both the first (?????) and last words (?????) of the Torah contain (??).

The first **3** (???) initials of the plague, by contrast, have a complete value of **147**, the age of Jacob, making the first **3** and last **3** equal to **220**, which we realize is equivalent to the **220** years until Jacob that the Israelites were not actually in Egypt during that **430** year journey of their soul. They are also equal to **8 x 27.5** as in the gematria of Pharaoh (????).

Just because we look in the clear mirror and see something specific does not mean we cannot look in it again and see something different, which will be related to varying degrees. It is like quantum field theory and looking at an electron which may be in millions of places at once or none of them; it is just a map of potentiality. When we look in the clear mirror at the first plague, *dam* (??), meaning blood, we see that its gematria is **44**, and see the **44** Chanukah candles associated with the **9** candles of the **72** Triplets. When we look into it again, we see that when the *YHVH* (????) is broken down into its component letters its value is $(10 + 14 + 6 + 14) = 44$. Pharaoh said he did not know Moses' G-d. The Creator introduced him with the first plague.

The blood infected the water, and it was through the water that Moses utilized the **72** Triplets to help the Israelites break free. He also utilized the *Shem MB* (??), the **42**-Letter Name at the end of the **10** plagues. Opposite ends of the bar loop together and form a circle. The clear mirror changes and shows us that the component letters in *MB* (??) also sum to **44**.

Both sets of letters (Triplets) were engraved on Moses' staff (wand), and as the clear mirror now shows us, $(72 + 42) = 114$, the standard value of the initials of the first **3** plagues (???), matching the **114** chakras, **112** of which are in the human body and physically reachable without taking a pure leap of faith to the final **2**.

The blood of "judgement," in the words of *Hashem*, flowed from the open womb for **7** days.

One more glimpse in the mirror shows us that the word Pharaoh (????) is *Pe* (?) and (???) or **80** and **275**, the measure of the cubit, which combine to form a product of $(80 \times 27.5) = 2200$, which gets completed with the addition of Abraham (**248**) to $(2200 + 248) = 2448$ HC, the year the descendants of Abraham completed the prophesied **430** years, the year they were freed from physicality. Maybe Egypt was the right place for the Creator to put the pyramid. The shifting images explain that Moses was **80** when he spoke to Pharaoh (????). No detail is irrelevant.

There must be a deeper linkage and a reason that two significant sets of **11** Torah coordinates sum to **550**, and the other to **541**, though we decide not to pursue them, nor to pursue the long trail to the *Alef-bet* split into odd-even sets of **11** letters each, that when paired up equal **541** with a small gematria value of **100**, matching perfectly the **100th** Prime Number, **541**. It is obvious that the folded **22** letters of the *Alef-bet* are bonded to the **11** initials of the plague that equal **541** and have an ordinal value of **100**.

It cannot be ignored.

The bond continues with the illuminated initials of the **11** *sefirot* (????????????), whose ordinal value is also **100**. While **1000** reflects the completion of *Binah*, **100** reflects the completion of *Zeir Anpin* and is this the height of the Future Holy Temple in Israel. It is also the radius of the inscribed sphere of the Core Equilateral Triangle.

It is in paragraph **11** of Exodus (*Shemot*) that the Torah lists all the Israelites who would be freed from Egypt en masse, all or nothing, all **11 sefirot** activated, all **11** names/initials of the **10** plagues engaged. Eleven (**11**) words for **10** plagues reveals **110** lights, as in the **110** years of Joseph, or twice **55**.

Encasement by the *YHVH* (????)

Moreover, while the difference between **50** (?????) and **5** (???) is numerically **50/5** or **10-fold**, it can also be $(50 - 5) = 45$. The metaphysical difference between the two words in the expression for **55** are the letters (???) or **620**, as in the numerical value of *Keter*, the highest *sefira* (dimension). The 3 letters (???) are also equivalent to **60**, as in the secret gateway, the hidden letter *Samech*, at the central vortex of the **42**-Letters Name.

These references are circling us back to the **10** Gates of **50** (*Binah*) leading into the Future Holy Temple and inward to the final Gate of **42** that guards the entrance to the **20³**-cubit³ Holy of Holies, the entrance to *Keter*. While the value **620** is also that of the Hebrew word *Esrin* (?????) for **20**, the hall of clear mirrors reminds us that *Esrin* (?????) is yet another word that contains (??) or **210**, and that the rest of the word is the first Triplet of the *Shema* (???)

It then reminds us that **550**, the sum of the initials of all **11 sefirot**, is **20** cubits in length, which is when it is pointed out to us that the **11th** Hebrew letter, *Caf* (?) as in *Keter* (???) has a numerical value of **20**, and that the spelled-out name *Caf* (??) has a value of **100**, as in the **100** cubit height of the Holy Temple, the **11 sefirot** (????????????), the **11** initials of the 10 plagues and the **11** pairs of the folded *Alef-bet*. Moreover, the spelled out *sofit Caf* (??) has a value of **820**, as in “Love thy neighbor as thyself” from Vayikra 19:18.

Caf (?), at the midpoint of the Hebrew alphabet is the one letter that aligns perfectly with the exponentiality ($x^{1.313}$) of the *Alef-bet*. It is the zero-point where the sine-wave of variations crosses the exponential curve of the **22** letters.

The *Caf* (?) is another unicorn.

Yet it through the next clear mirror that we see the inscribed sphere of the Core Equilateral Triangle. Its radius of **100** is *Caf* (??), tying it to the plagues, Israel, the **11 sefirot** and the *Alef-bet*. Is it somehow the source of them all?

Is the inner cosmos trying to show us that we are better off working with the source codes rather than their end-products? End-products, results, are already extrusions through constrictions. They are limitations stripped away of possibility. They have the stench of death and finality in them, guaranteeing a reset. We live in an existence where everything we touch is an end-product.

Source code operations are pure potentiality. The inner cosmos is trying to explain the source codes to us through geometry, which may be the only way we are capable of connecting to them since we were incubated in a geometric world.

The inscribed sphere of the Core Equilateral Triangle of radius **100** is twice **50**. Given the same 2:1 proportion of the bisecting rays another equilateral triangle can be drawn inside that first

inscribed sphere with a resultant inscribed sphere radius of **50**. With the mirrors facing once another and their images bouncing back and forth, its apparent that the system goes on forever, with the next inscribed sphere having a radius of **25**, as in the **4th** root of the **390,625** elements of the Torah. In the next clear mirror, the value **5 (???)**, the other half of the divine **55** combination, is smiling at us, reminding us that it is the **8th** root of the **390,625** elements of the Torah.

Everywhere we look, the hyperspace universe wants to spoon feed us more knowledge. It is the opposite of the physical world where you have to pay and work for knowledge, and what we can learn in hours of spiritual time would take someone lifetimes in physical time.

As we glance across to another corridor, we see that **5** and **6** and **50** knocked together give us a product of $(5 \times 6 \times 50) = 1500$, the same as that of the *YHVH* (????), $(10 \times 5 \times 6 \times 5) = 1500$, which is also the highest word value in the entire Torah. This is not surprising as the *Hei* (?) of *Binah* and the *Hei* (?) of *Malchut* have already been known to represent $(50 + 5)$ or **55**. When they are presented together, the *Vav* (?) knocks against them to form **330**, the base of the pyramid that encases the Tower of Truth. Is it encased in the *YHVH* (????)? From the *Yud* (?), **10**, comes *Yud* (???), **20**, from which comes **20** generations and **20** stacked cubes, from which comes **210** levels, cubits and years. Why do you think His Name was engraved over the secret entrance when the pyramid was sealed, the only engraving or marking on the entire mountain?

Why do you think Joseph was sold for **20** pieces of silver in chapter **37** within paragraph **73** of Genesis to begin the **210** years in Egypt? And what does this have to do with *Chochma* (????) of numerical value **73** and ordinal value **37**? Or with Joseph living $(73 + 37) = 110$ years?

Is it just that the **9th** *sefira* of *Chochma* represents **90**, and that that moment in time represents nearly exactly **90%** of the time span from Adam until the Israelites entered the Promised Land in **2488** HC?

A Secret Meaning

Another hallway and clear mirror shows us that the *atbash* cipher of fifty-five (????????????) is **314** as in Pi (**3.14**) and *Shadai* (???) and that the *atbash* of its first **4** letters is **112**. And that **314** is the value of “the field (????).”
