## Chapter XXXII Part Q – The Law of One.

Author : Meiliken

Date : 05-08-2021

### The 4 Pillars

Pillars of water and air rain down from above. Pillars of fire and earth rocket upward. Utter destruction in their wake. A globe covered in deadly twisting pillars, jutting out into the sky everywhere like a giant corona virus. Fire, Air, Water, and Earth. As our Sun becomes more active and the Earth's magnetic field grows weaker, vortices are appearing out of nowhere. Like the sinkholes pockmarking the planet, magma and lava are compelled to surge upward, hurtling earth and fire skyward. Electrical charges surge through the atmosphere as strobic lightning fill the clouds with perpetual flashes and bolts rain downward at unprecedented levels. Vortices of wind twist and squeeze the clouds, causing concentrated torrential downpours of water and historically large chunks of ice. Other vortices spin off, manifested as destructive tornadoes, derechos, sandstorms, and fierce driven winds, ranging across cities and deserts alike. Forest fires sweep out and are sucked upwards from the drought parched landscapes. Pressure gradients rising and falling precipitously, drawn to mysterious voids. The pressure generated in the ionosphere does not stop at the crust. Under the strain, the earth eventually cracks open. [Do not proceed unless you have read at least Chapter 32, Spherical Time](#). If you are ready, a whole new world awaits. The [Journey begins here](#) if you missed it.

Increased changes in the 4 pressure mediations upon the fields encapsulating the earth are creating vortices. Vortices are pulling in the moisture and rain and funneling it into a concentrated downpour. They grab hold of the wind and whip it up into 100 mph vectors.

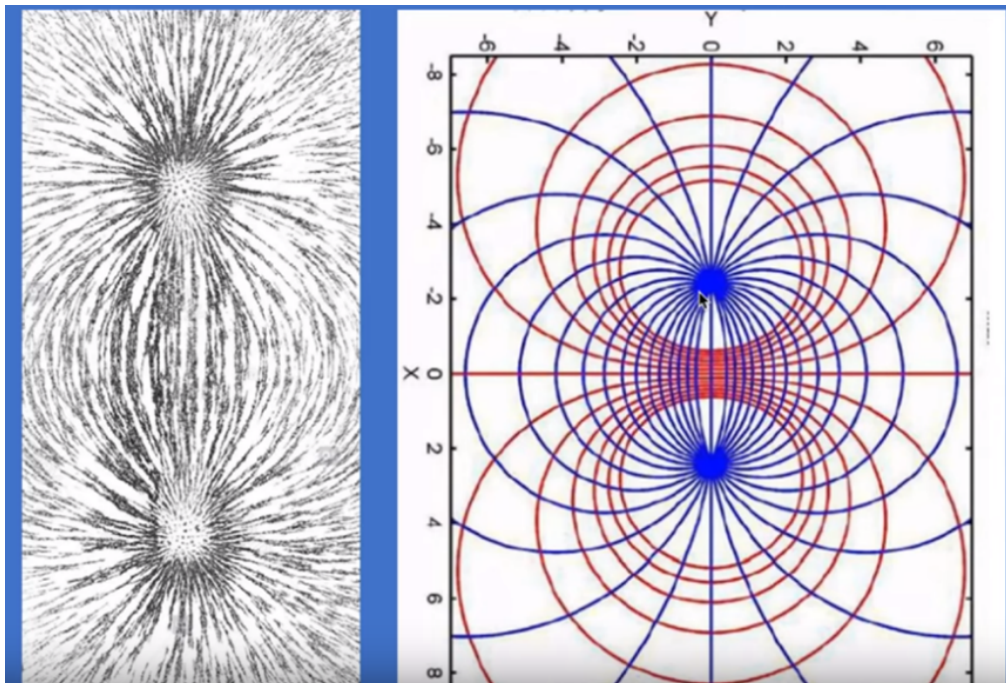

Fire (??), Air (???), Water (???), and Earth (???). The 4 elements, as delineated in the Zohar, correspond to the four (4) forms of energy movement in our world. As we have previously learned, these are influenced by the 27 higher dimensional pressure mediations and the fields they interact with. These four (4) energy forms are directly analogous to the 4 forces of the YHVH (????):

Flipping their order, reading from right to left as in Hebrew, we get YHVH (????):

The inner cavern informs us that the order of the elements is based on the structure of their names, their middle letters in particular (????): Water (???), of Fire (??), Air (???), and Earth (???)—the *Yud* (?) being the circular, the *Alef* (?) being the centrifugal force drawing everything into its center, the *Vav* (?) being the linear force and the *Pe* (?) representing the spiraling centripetal force or pressure mediation spinning everything outward. The 4 pressure mediations interact with the inertial field to create electro-magnetism and every other force we observe.

The inner cavern further informs us that the initials of the 4 elements (????) spell out **4127**, as in the **401273** elements of the Torah, and moreover that **4127** is by design ( $4200 - 73$ ), with **73** being the gematria of the *sefira Chochma* (Wisdom) and the **73<sup>rd</sup>** Triangular Number that is the value of the Torah's first verse **2701**.

The numerical value of Fire (??), Air (???), Water (???), and Earth (???) is **955** and by adding Man/Adam (???) to those elements brings its total numerical value to  $(955 + 45) = 1000$ . The ordinal value of those 4 elements is **145**, like the **145** digits that follow the numerical string ...**1000**... through to the **1000<sup>th</sup>** digit in Pi that total **666**. Therefore, the complete value of the 4 primordial elements is **1100** and with the *kolel* for the **11** letters, its **1111**.

---

## Primal Frequencies

The inner cavern wants us to understand a principle of our physical construct and that is that those **4** elements must always be in balance, a quantity metaphysically speaking of **275** or **10** cubits each, as in their average  $(1100/4) = 275$ . That makes **40** in total, as in the age of maturation in the Torah, the **40** days of the Flood that resets the Earth, and of the **40** days that Moses spent on Sinai to retrieve the Tablets.

We are further informed that perhaps it would be easier for us to understand it as a system whereby each element much be in tune and harmony with the primal frequency (**27.5** Hz). If not, the imbalance will draw in more of the other elements and chaotic perturbations and turbulence will ensue until equilibrium can be reestablished. In an aquarium that might be interesting to observe. In the aquarium that is our ionosphere, the consequences can be devastating. As fiery charges of lightning rain down from the heavens in bolts thicker than ever before and now some are even rising upward off the mountaintops in the western USA we have to wonder if the heavy deluges and crater causing icy hail are not the natural consequences of these imbalances, physicality's compensation mechanism. As explained in the Torah, all things tend toward chaos and there comes a point when enough is enough and there comes a point when the whole system needs to be wiped clean. Water covered the Earth by 15 cubits. Every time the Torah refers to cubits it is referring to the primal frequency (**27.5** Hz).

We have to wonder what effect injecting 5G into the ionosphere at **27.5** GHz may have had upon that equilibrium and why that agenda was pushed so vehemently and deployed clandestinely under cover of the lockdowns. The timing does seem suspicious.

Those **11** letters align with the **11** *sefirot* and with the **11** Triplets of *Bereshit* through the equation that divides their sums,  $3003/1100 = 2.73$ , as in the cosmic convergence equilibrium (**273**) that is built into the dimensions of our solar system and that is necessary for converting a circle to a square and visa-versa. While **273** and consequently **1.273** are built into those same **401273** elements of the Torah, as we know,  $401273/? = 248,000$ , reflecting the **248** words and **1000** letters of the *Shema*. The inner cavern now shows us that the complete value of *ruach/air* (???) is **248**, matching the value of the final letters (???) in the three elements Air (???), Water (???), and Earth (???), also **248**. Then when the balance is established with Water (???) their final letters total **288**, as in the **288** Holy sparks we are supposed to gather together, and as in the year **2889** HC, the radius of Spherical Time.

The **3** initials of Fire (??), Earth (???) and Water (???) total **111**, the numerical value of *Alef* (???) , or  $1/10^{\text{th}}$  the total complete value of the **4** elements, **1111**. Meanwhile, the value of the **4** initials is **311**, which the inner cavern lets us know is directly connected to the **11** Triplets and **33** letters of Creation that total **3003**.

As we start to paddle, the canoes begin to rock from side to side. Struggling to regain our balance, when we look up, we are in a hall or **4** pillars and in between them are the **4** sets of Triplets. On their own our canoes turn from pillar to Triplet matrix to pillar, slowly around and around. It is them that we are shown the **4** elements plus the **112** Triplets (**311 + 112**) equals **423**, not just 1 less than **424**, *Moshiach Ben David*, but the value of  $\text{Phi}(\text{?})^3$ , the field that controls and guides the pressure mediations that govern the physical forces in our world.

We drift out of that exciting hall, and slow drift through nothingness until we get the sense that we are missing something. At that moment, the inner cavern projects the other primal frequency into the iridescent wall, **1.1 Hz**. It suddenly makes sense. We learned about the interaction of these two unique primal frequencies **27.5 Hz** and **1.1 Hz** that derived from the reduction of 9's upon the set of all integers when we were studying Tesla's **3 – 6 – 9** frequency integration. It was Tesla who understood how to tap into the frequencies in the ionosphere to distribute free energy. This also explains why in one of his experiments on Long Island there was a compensatory earthquake in lower Manhattan. That further begs the question what experimentation has been going on lately to cause compensatory bubbles and anti-bubbles to rise to the surface and leave sinkholes in their wake.

Nonetheless, the inner cavern finds our thoughts distracting and jerks our canoes against one another, nearly dumping us into the brink. As we right ourselves and stare into the rippling river it tells us this connection to **9's** and frequencies is why there are 18 letter *Zadi* (?) of numerical value **90** in the array we call the *Shema*, the numerical value Water (???), reflecting (**3 + 6 + 9**). It is also why *Zadi* (?) is located **3** times, in the first, last, and in the middle of the middle row of the **42**-Letter Name matrix. And also why it is found at the end of the **11** Triplets of *Bereshit*, and yet only once in the **216** letters of the **72** Triplets, in the **60<sup>th</sup>** Triplet. Altogether, the letter *Zadi* (?) connected to water is found **24** times in the **112** Triplets for a total value of **2160**, as in the diameter of the Moon. Physicists call the connection between the Moon and the water on Earth gravity, yet they have yet to find neither a particle nor a wave. Perhaps, they should use a PCR test. It is said they can find anything.

Come to think of it, it is interesting that the Moon exerts such a strong gravitational force as to lift and bulge the ocean tides by many feet yet exerts no force whatsoever on lifting a piece of paper, a leaf, or even a dust particle off of the land.

The inner cavern smiled. We are starting to catch on. In our studies we often cite the Great or

---

Encasing Pyramid, but two other historic unicorns also stand out. Göbekli Tepe dates to around **11,600** years ago and Atlantis, was dated by the Plato and Solon also to around **11,600** years ago, both in line with the **12,000**-year excursion cycle. We are not speculating that the ancient Turkish archeological marvel was Atlantis but given Spherical Time and the **5778** year reset periodicity of the Sun, cosmos, and of life on Earth, it is more likely that we are Atlantis, the fabled world where the elites grew greedy with technology and brought about their own destruction, sinking beneath the waves. After the massive mega-tsunamis, the plasma etching, the tumultuous earthquakes, asteroid pounding, volcanic upheaval and deep freeze very few will survive and very little of civilization. After a few generations, there will be little to no remnants of our existence, only the legends of wondrous technology, flying machines, and the ruling elite who enslaved the population and created strange transmutations. After **6000** years—the Heinrich event cycle represented by the **6 Alevs (?)** in the Torah’s first verse—the planet will be ready to repopulate with Noah’s ark. The simulation resets to zero-point and the countdown begins, ready set, day 1, day 2...Adam, and the sin of tapping into the Tree-of-Knowledge of Good and the evil of the prior reset. The DNA was pure, set to ACTG, the 4 nucleotides of numerical value **424**, the consciousness of *Moshiach Ben David*, but it was tinged with the slightest bit of knowledge retained from prior resets thanks to the bite of that fruit.

Without that knowledge, we would be free to explore the limitless possibilities and pathways of Spherical Time, but because of it we are drawn to the same and similar ones over and over again, never understanding why we are inexplicably drawn to certain people, places, or things, or why we can sometimes see what is coming when others cannot, or why we get *déjà vu*. Our consciousness is riding our minds and it is our minds that are integrated into the simulation. We choose our avatars, which started out perfect and could last forever, an image from above. As the knowledge in the back of our minds grew like a sprouted seed, the lifetime of the avatars went from **1000** years and steadily shrunk and each time we grew more creative with them.

## 12,000 Year Cycle

Both equations of Spherical Time share the same radius (**5778**) and the same diameter **2(5778)** or **11,556**, which is **90** square miles more than Israel’s current **11,466** square miles. It is as if Israel is its own protective bubble, just as we were told in the Zohar.

We are immediately struck, literally, wet drops of some kind hit us on the backs of our heads. None of us saw them falling yet we all felt them. Now we are experiencing *déjà vu*. Reassuring ourselves, we see that the 90 miles is a reflection of the  $90^\circ$  magnetic field flip and maybe the Earth’s physical flip too, both expected to come at any moment. We recall that we were taught that the Earth’s current tilt and thus precession is based on  $90^\circ$  as in  $(90^\circ - 23.4^\circ) = 66.6^\circ$ . Moreover, we see that the 90 miles relates to the numerical value for water (???), the first element. While the **12,000**-year cycle is a pulse that lasts **222** years at its peak, the effects may be felt twice as long, as early as **11,556** years, or **963 x 12**, the time coefficient. We are left wondering if  $963/27.5 \text{ Hz} = 35.01818$  is just a coincidence, or a key to disengaging our consciousness from the simulation.

There is a bend in the inner cavern and around it the river forks in two directions, yet the current takes us all down a singular slightly narrower path, yet still just as sparkly and otherworldly. Referring to animals and species, we are shown and informed that the word for kind as in “of its

---

kind” is used **10** times in Creation, the first chapter of Genesis, and as the animals and species multiplied ( $2 \times 2$ ) **10** times we get  $2^{10}$ , as in the  $2^{10}$  or **1024** word values in the Torah. The highest, such word value is **1500**. The Zohar teaches us in *Bereshit* 31: 319 and 320 that the **42** letters of *Binah* created the world (physicality) and “they are crowned in all four [**4**] parts of the world”. It goes to state that the “[**42** Letters of Creation (the **42**-Letter Name)] “struck the rod of the great serpent and traveled **1500** cubits inside the chasms of the dust....”Darkness covered everything until light emerged to break through the darkness and shine [in all its perfection], as it is written: ‘He uncovers deep things out of darkness, and brings out to light the shadow of death’ (Job 12:22).” The Zohar goes on to state the scales were weighed and they measured **1500**.

The great serpent refers to the endless wave emanating from the center of the universe, out of the **42**-Letter Name, the **42** Letters of the Name, the Name of **42** found in Job. and the concept of **42**. The value **1500** being the highest word value of the  $2^{10}$  coincides with the waves striking physicality (the Earth, Sun, Moon) and resetting the darkness with light all over again.

While we know **1500** cubits equals **41,250**” or **3** x the Phi(?) angle (**137.5°**), the value **3** is the smallest word value in the Torah and the **12,000** years of the cosmic cycle divided by **41,250**” equals **.2909090**, as in the center two letters of the **42**-Letter Name Matrix.

Huh!

Something splashes us out of nowhere, but the inner canal is perfectly still, not a ripple. We can only surmise that the inner cavern splashed us so that we will not overlook the **90** in the equation, as in the numerical value of water. The value **90** seems to be the key to something deeper.

The river current increases and we are swooped into a dark spherical opening in the cavern, perfectly round, but this new place is short-lived as we are rushed into and shot through a narrow black tunnel that opens to a dark massive heart, or butt-shaped, cavern, half giant sphere, half double-lobed. Everything is dark and black in the center but bright and opalescent on the edges. As the canoes veer closer to the walls, we see them as porous with numerous narrow curved luminous tunnels leading off them. Suddenly, a strong current sucks us down and into one of them and we spiral into the tail of a multi-colored seahorse, where another split in the bright sparkly wall grabs us and hurls into an identical seahorse. This happened again and again. The turns should be getting tighter and tighter, yet each one is sweeping, giving all our canoes ample room to maneuver. It makes no sense. Every time we are sucked into a new contorted yet beautiful passageway it is identical to the last in every detail. And again, and again the repetitive disorienting fractal motion draws us deeper and deeper into a concentrated space.

Either we are getting smaller and smaller, or we are occupying the same space dimensionally. There is no room for this live Mandelbrot set in our 3-dimensional reality. This is when we realize that our minds are not limited to 3-dimensions, and that it is through numbers that our minds can operate in higher-dimensionality. Fractal patterns, like the Phi and Pi patterns are found throughout our physical construct, yet they exist wholly because of numbers, and numbers cannot be touched. They have no “physical” attributes and we acknowledge that they are only conceptual. To us, they exist only in our minds.

We are then shown the next dimension of the levels or summations, but every other number, the even ones, are removed. This immediately reminds us of the odd-even split in the *Alef-bet* that began our studies ages ago. So  $(1 + 3) = 4$  and  $(4 + 5) = 9$  and  $(9 + 7) = 16$ , and so forth.

**1111111111 1 1 1 1 1 1...**  
**1 3 5 7 9 11 13 15...**  
**1 4 9 16 25 36 49 64....**

If it is not readily apparent, this level is all squares,  $1^2, 2^2, 3^2, 4^2, 5^2, \dots$ , the set of all natural squares. The inner cavern adds an animated graphic of the first cube being surrounded by the next 3, then those being surrounded by the next 5 and so on, each time forming a perfect square out of those ones(1).

**1111111111 1 1 1 1 1 1...**  
**1 3 5 7 9 11 13 15...**  
**1 4 9 16 25 36 49 64....**

Once again, the inner cosmos is showing us the principle that math is geometric, meaning so are our minds, and the simulation we believe we exist in.

When we look back, a new set of numbers replaces the set of odd numbers. Instead of every 2<sup>nd</sup> number being removed or skipped over, we now see the set of every 3<sup>rd</sup> number (positive integer) removed, skipping 3, 6, 9, 12...:

**1111111111 1 1 1 1 1 1...**  
**1 2 4 5 7 8 10 11 13 14 15...**

---

Then when the same system is applied as before we are shown:

**1111 1 11 1 1 1 1 1 1 1 1...**  
**1 2 4 5 7 8 10 11 13 14 15...**  
**1 3 7 12 19 27 37 48....**

As we ponder if the numeral **8** above the **27** has a connection to the **8** vertices in the **27**-position Essential Cube of Creation, another level is added by adding every **3<sup>rd</sup>** number instead of every **2<sup>nd</sup>**:

**1111 1 11 1 1 1 1 1 1 1 1...**  
**1 2 4 5 7 8 10 11 13 14 15...**  
**1 3 7 12 19 27 37 48 61....**  
**1 8 27 64 125...**

It is now obvious to us that while the 1<sup>st</sup> order system gives us the 1-dimensional concept of the set of all positive integers, the 2<sup>nd</sup> order system gives us the 2-dimensional concept of planal space through the resultant set of all natural squares ( $x^2$ ), and the 3<sup>rd</sup> order system gives us the 3-dimensional concept of space through the resultant set of all natural cubes ( $x^3$ ).

The cubes arrange themselves into a  $3^3$  cube like the Essential Cube of Creation.

The 3 faces in any cube form a hexagram, and in the  $2^3$ -cube that particular hexagram contains

---

7 blocks in total. In the  $3^3$ -cube that hexagram has **19** unit-blocks, and in the  $4^3$  cube that hexagram contains **37** unit-blocks. We are then shown that those numbers match the numbers in the level above the level of the cubes, illustrating to us the geometric continuity between the folding of space from dimension to dimension and the simple programmed sifting of the integers.

<b>1111</b>	<b>1 11</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1...</b>
<b>1 2 4</b>	<b>5 7</b>	<b>8</b>	<b>10</b>	<b>11</b>	<b>13</b>	<b>14</b>	<b>15...</b>			
<b>1 3</b>	<b>7 12</b>	<b>19</b>	<b>27</b>	<b>37</b>	<b>48</b>	<b>61....</b>				
<b>1</b>	<b>8</b>	<b>27</b>	<b>64</b>	<b>125...</b>						

The same system holds true for the 4<sup>th</sup> dimension, yielding 4-dimensional hypercubes. It holds for all dimensions, adding one level at a time. The inner cavern lingers at the 5<sup>th</sup> dimension.

<b>1 1 1 1 1 1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1</b>	<b>1...</b>
<b>1 2 3 4</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>11</b>	<b>12</b>	<b>13</b>	<b>14</b>	<b>16...</b>			
<b>1 3 6</b>	<b>10</b>	<b>16</b>	<b>23</b>	<b>31</b>	<b>40</b>	<b>51</b>	<b>63</b>	<b>76</b>	<b>90</b>	<b>106....</b>		
<b>1 4</b>	<b>10</b>	<b>26</b>	<b>40</b>	<b>50</b>	<b>131</b>	<b>194</b>	<b>270</b>	<b>376...</b>				
<b>1 5</b>	<b>31</b>	<b>80</b>	<b>211</b>	<b>405</b>	<b>781...</b>							
<b>1</b>	<b>32</b>	<b>243</b>	<b>1024...</b>									

Right away several numbers pop out to us. Obviously, the bottom line, or 5<sup>th</sup> level is comprised of 5-dimensional hyper cubes, including the  $2^5$  pathways of the Tree-of-life, the  $3^5$  gematria of the Abram, and the  $2^{10}$  word values in the Torah. The other numbers that we recognize from the Torah are probably significant, but the inner cavern wants us to see something else. It morphs out of the colorful sparkles into clarity for us.

---

<b>1 1 1 1 1 1</b>	<b>1 1 1 1 1 1</b>	<b>1 1 1 1 1 1</b>	<b>1</b>
<b>1 2 3 4 5</b>	<b>6 7 8 9 10</b>	<b>11 12 13 14 15</b>	<b>16...</b>
<b>1 3 6 10</b>	<b>16 23 31 40</b>	<b>51 63 76 90</b>	<b>106....</b>
<b>1 4 10</b>	<b>26 40 50</b>	<b>131 194 270</b>	<b>376...</b>
<b>1 5</b>	<b>31 80</b>	<b>211 405</b>	<b>781...</b>
<b>1</b>	<b>32</b>	<b>243</b>	<b>1024...</b>

Each of the numbers represent the sum of the various possible pathways between the numbers. There is 1 pathway through the ones to 1, 5 pathways to the number 5, 10 to either 10 and so forth. This now imparts new understanding to the **32** Paths of Wisdom and the **32** Pathways of the Tree-of-Life.

We are told that this is just as it is on Pascal's pyramid, which we are shown is just an extension of the first cascade turned on its side.

**1 1 1 1 1 1**  
**1 2 3 4 5**  
**1 3 6 10**  
**1 4 10**  
**1 5**  
**1**

Every number in Pascal's pyramid represents the sum of the pathways to it from the original One(1). This is why we were taught even before this journey began that Pascal's pyramid was an elegant way of portraying the summation series with each level giving rank and order.

The first row is all Ones (1,1,1,1,1,1,1...) because everything that follows must begin with One (1), figuratively and mathematically. The next row is the sequential set of all positive integers, or natural numbers (1,2,3,4,5...) derived from the sum of the ones, their pathways. The next row is the set of all Triangular Numbers (1, 1+2, 1+2+3... or 1, 3, 6...). Then row by row, we get the cumulative sum of the previous rows, so for the 4<sup>th</sup> row we get the set of the cumulative Triangular Numbers (1, 1+3, 1+3+6... or 1, 4, 10...). The 5<sup>th</sup> row in turn is the set of the cumulative sums of those cumulative Triangular Numbers (1,1+4,1+4+10... or 1, 5, 15...), and so forth, row after row, infinitely. Those of the 4<sup>th</sup> row are called Tetrahedral numbers by mathematicians and the subsequent rows are simplices, 5-simplex, 6-simplex etc. We will refer to them as orders, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup> etc. It is the Valley of the Ziggurats all over again.

---

1 1 1 1 1 1 1 1 1  
 1 2 3 4 5 6 7 8 9  
 1 3 6 10 15 21 28 36 45  
 1 4 10 20 35 56 84 120 165  
 1 5 15 35 70 126 210 330 495

We are once again reminded about the 13<sup>th</sup> order, where the Names of G-d are included. We also see what escaped us before, that the 5<sup>th</sup> order 4<sup>th</sup> rank is **35** and the 5 x 7 order-rank is **210** as in the Planck diameter, etc, **210** pathways. When we see the 9 x 7 order-rank of **3003**, it makes us wonder whether the **11** Triplets of value **3003** really are not **3003** pathways. And if that is so, then is each letter an agglomeration of pathways?

1 1 1 1 1 1 1 1 1 1  
 1 2 3 4 5 6 7 8 9 10  
 1 3 6 10 15 21 28 36 45 55  
 1 4 10 20 35 56 84 120 165 220  
 1 5 15 35 70 126 210 330 495 715  
 1 6 21 56 126 252 462 792 1287 2002  
 1 7 28 84 210 462 924 1716 3003 5005  
 1 8 36 120 330 792 1716 3432 6435 11440  
 .  
 .  
 .  
 1 13 91 455 1820

---

That all fades away and we are left with the image of the cascading integers of the arched

ceiling above us. We are shown that all the groupings are of **24** and told that the sum of all the numbers in the 2<sup>nd</sup> grouping equal **424**.

<b>1 1 1 1 1 1</b>	<b>6</b>	<b>1 1 1 1 1 1</b>	<b>6</b>	<b>1 1 1 1 1 1</b>	<b>6</b>	<b>1...</b>	<b>6</b>
<b>1 2 3 4 5</b>	<b>15</b>	<b>6 7 8 9 10</b>	<b>40</b>	<b>11 12 13 14 15</b>	<b>65</b>	<b>16...</b>	<b>90</b>
<b>1 3 6 10</b>	<b>20</b>	<b>16 23 31 40</b>	<b>80</b>	<b>51 63 76 90</b>	<b>280</b>	<b>106...</b>	<b>560</b>
<b>1 4 10</b>	<b>15</b>	<b>26 40 50</b>	<b>155</b>	<b>131 194 270</b>	<b>595</b>	<b>376...</b>	<b>1545</b>

<b>1</b>	<b>1</b>	<b>32</b>	<b>32</b>	<b>243</b>	<b>243</b>	<b>1024...</b>	<b>1024</b>
	<b>63</b>		<b>424</b>		<b>1805</b>		<b>5296</b>

Obviously, it is this second column that looks the most suspicious to us. As the inner cavern points out, their sum total, is *Moshiach Ben David*, matching the **90,100 Yuds(?)**, *Heis(?)*, and *Vavs(?)* in the Torah as the sum of 1 - **424**. We also notice, though, that the first 3 levels add up to **126** or the value of each place/face of the Essential Cube of Creation and that levels 2 -4 add up to **275** as in the sacred cubit (**27.5"**) and primal frequency (**27.5 Hz**), which is even more telling since  $(40 + 6) = 46$ , the numerical value of the word for cubit. Things get even weirder once we realize that the bottom 4 levels add up to **378**, or the value of all 3 planes of the Essential Cube of Creation, the sum of the integers/ordinal positions of all **27** numbers/cubes within the Essential Cube of Creation. Moreover, as we know, **378** is the numerical value of "*Echad Ushmo Echad* (????????????)" or "His Name is One," and while the value **111** is that of *Alef* (???) of One, the value **32** is the value of the **4** component parts of the letter *Alef* (?), One.

These resultant cascading numbers clearly are not arbitrary, yet they were derived from a simple algorithm, a simple sifting and summing process directed toward the **5-dimensional** hypercubes. The inner cavern was just explaining to us that our minds are made solely of arrays of numbers and now it is showing us intelligent design built into those numbers and how they all connect to and are sourced from the One(1) and how the closer we get to the One(1) the closer we get to *Moshiach Ben David* consciousness. We are not to forget that these numbers shown to us are more than numbers; they are all the sums of pathways, a total of **424** Pathways, just as the **90,100 Yuds(?)**, *Heis(?)*, and *Vavs(?)* in the Torah are **424** Pathways.

It the midst of all these dumb-founding revelations and enlightenment, the inner cavern wants to let us in on a little secret. As if we had a choice but to listen; our canoes are frozen in place. The last two numbers, sets of pathways, in that column (**111 + 32**) equal **143**, as in the value of the spelled-out aspect of the Name *Ehyeh* (????????????), that value **143**, the **143** pathways through this higher Name, is the balancing element in the **72** Triplets that total **9143**, as has been explained previously. From there, we are shown that the Name *Ehyeh* (????????????) of the **143** Pathways to *Moshiach Ben David* consciousness has **3 Alefs** (?).

---

Next, it is explained to us that the first light comes from the *Alef* (?), **1**, then, *Alef* (???) **111**, then **1000**. And **3** *Alefs* (?) is then **3000**. It is also **3003** as in the **3003** pathways in the **11** Triplets of Creation. It is also **3333** as in the **3333** years from the receptions of the Torah in **2448** HC to today (5781 HC).

The Spherical Time equation reappears, and we are shown that  $(3000 - 111) = 2889$ . The Creator's calling card, the first **111** pathways, are built into the Spherical Time year **2889**. There is no subtraction or addition in hyper-dimensional mathematics,  $(3000 - 111)$  is just as much an addition as a subtraction, as a multiplication; it is a way to bring **4** aspects, of *Alef* (???), Oneness together in **3**, just as the **3** numeral ones(1) in **111** is a way to bring the **3** *Alef* (???), Oneness, together in **3**. We should not forget that **111** is more than **3** numeral ones(1); it is **3** levels of one (1), each in their simplest state, **1**, **10**, and **100**.

$$4\pi(2889)^2/2889 = 36304.24470$$

We now understand more fully that that midpoint in King David's life, **2889** HC, was never an arbitrary date or radius. It is the result of a purposeful equation, linking the primordial *Alef* (?), the One, with **3**. Even the **4470** sum of the first **1000** digits in Pi, is another expression of *Alef* (???) liked with **3.141**...

The inner cavern then shows us the distribution of the **1**'s within those **1000** letters. There are **116** of them and they appear quite random, many in clumps like **11,1X1**, and **111** and some up to **46** digits apart, yet there are highly suspicious placements among them, including but not limited to **314** (Pi), **363**, and **424**, *H'Moshiach* and *Moshiach Ben David* from the Spherical Time equation **36304.24470**. It is as if it is all about One(1) and always has been. Even **889** is marked by the digit "**1**" as in the **2889** radius, while the "**4**" in **4?** is found right between the first two **1**'s as in **3.141**.... Israel at digit #**541** is there too. A few of the other notable for being key Torah number placements include **37**, **40**, **110**, **175**, **238**, **243**, **395**, **432**, **670**, **704**, **730** and **963**. There are several others we recognize but even a truly random distribution will hit upon a few coincidental numbers, so we try to move on.

Referring to the associated **3** levels of **1**, the inner cavern wants us to understand that it is necessarily incorporated into the **27**-position **3<sup>3</sup>** Essential Cube of Creation. We now understand that  $3000 - 111 = 2889$ , the Spherical Time radius, but the inner cavern further illustrates this premise in the physics equations  $(42/? - g) = (42/137.03599 - .302822131) = 11/3000$ , and in  $3000/11 = 272.72727$  and in  $3000/111 = 27.027027$ . We are once again reminded that  $(2+8+8+9) = 27$  and that  $(3+6+3+0+4+2+4+7+0) = 33$ .

$$3N + 1$$

The inner river releases us, and we drift no more than a couple feet before this conveyor through the hyperspace mind halts us again. The effervescent inner cavern has switched gears on us and shows us a window into the "**3N + 1** Conjecture" that has twisted mathematicians in knots for over a century. It is simple enough, but no one has come close to proving it. The inner cavern does not show us the illusive proof either; that is not its goal or intention. The simple conjecture is that any number (N) to which  $(3N + 1)$  is applied repeatedly with the caveat that if

---

the result is an even number, it will be divided in **2**, that resultant chain of numbers will always end in 4, 2, 1. The results always seem to fit the conjecture, but no one knows why they have to. The results are also seemingly random as to how many iterations it takes to get down to 1 and as to how large,  $\max(N)$ , the number will get before fluctuating back towards 1.

We should not be surprised anything involving numbers tends toward **1**, but the inner cavern wants us to understand two things about these results. First, that it is not just the 4,2,1 tail, but all the numbers must dovetail on the doubling curve at some point, like 42, 21, 64, 32, 16, 8, 4, 2, 1, which brings up the second point. While on the surface, just like Pi, the results appear random, the universe has embedded coding to the contrary.

About that doubling curve, as most mathematicians who have looking into  $(3N + 1)$  quickly discover, from that first doubling curve there are offshoots or branches or other doubling curves (5, 10, 20, 40, 80, 160..., 3, 6, 12, 24, 28...) that other numbers dovetail into, and other doubling sequences that branch off of these (13, 26, 52...). The result looks like coral and is very intriguing, but what it does is assign another number to the set of all positive integers, the iteration value, and also the  $\max(N)$  value for the sequence.

Given the connection to the Name *Ehyeh* (????) of numerical value **21** and of the Essential Cube of Creation to **42**, it is notable that those two numbers are the first to merge with the doubling curve at the number **64**, four times higher than all the others., especially given that the central complete value of the inner position of that Cube is **64**. The  $\max(N)$  value for both **21** and **42** and hence any doubling of **21** or **42**, like the **336** letters in the **112** Triplets is **64**.

Come to think of it,  $(3N + 1)$  looks an awful lot like **(3000 & 111)**. To show us that we are not grasping at straws, the inner cavern of the inner cosmos tells us that the iteration value for the number **27** is **111**, *Alef* (???). Moreover, the  $\max(N)$  for that **111** sequence down to **1** is **9232**, as in the value **232** or the 4 aspects of the *YHVH* (????), but more interesting is that  $(9232 - 9143) = 89$ , which when you understand, translates to the  $\max(N)$  for **27** less that the value of the **9** candles of the **72** Triplets connected with Chanukah equals the value of Channukah (**89**). As usual, the simple encoding of the cosmos is in plain sight, yet invisible to anyone who has not gotten deep enough into the Torah and the inner cosmos.

Does an iteration value for 89 being 32 have purposeful meaning, or for 26 having one of 10? Maybe, but **54** and **55** having the iterations value of **112** as in the **112** Triplets in the Torah certainly does, with **55** being **2** cubits and the entranceway as we have discovered (been shown) and **54** being the number of portions in the Torah and segments of **107** in **5778**, the **107<sup>th</sup>** triangular number that is  $(2 \times 2889)$ .

We have previously learned much about the make-up and encoding within the **72** Triplet **8 x 9** matrix—and yes, the inner cavern tells us **(8 x 9)** and **89** were not designed that way by the Creator accidentally—and especially about the central Triplets of that matrix. The two central Triplets that we have seen forming an apex pyramid are ordinal numbers **36** and **37** of the **72** and the iteration value for these two numbers are **21** and **21** respectively, **42** together. By showing us the highest Name of **42**, *Ehyeh Asher Ehyeh* (????????????) the inner cavern wants us to know that this is a powerful hyperspace connection that we are not meant to miss. It also playfully clues us in that the  $\max(N)$  for **37** is **112** connected to the deep integration of the Torah's first verse with the number **37**.

---

Before we drift on, the sequence (1,4,2,1), called the “trivial” sequence that is the basis of the conjecture flashes in front of us. This is the ultimate sequence that the  $(3N + 1)$  conjecture states all numbers must reduce to using this algorithm because it ends in an endless loop. The inner cosmos tells us it is not trivial: (1-42-1).

### The 3 Mothers

One of us spots a sign on the sidewall just above the river level saying, “Perfect Numbers to Follow.” We take it to mean that we are about to learn more about the Perfect Numbers again and someone suggests that maybe we are about to exit the inner cavern and get back into the Plain of Perfect Numbers. With all the various sets of numbers we have just been shown integrating with the arrays in our minds, several more of us notice 3 letters (???) engraved into the opal on the opposite wall. These are the 3 Mothers, as Abraham Avinu put it, after *his* trip to the inner cosmos. We can only imagine what his journey looked like. Did he sit in one of these same canoes? The value of the 3 Mothers (???) is 341, and when we apply  $(3N + 1)$ , we get 1024, as in the 1024 or  $2^{10}$  word values in the Torah, and as in the 1024 pathways we were just taught about. With an ordinal value of 35 and complete value of 376, there is an obvious synergy and significance to the this grouping of 3 letters. Perhaps the answer lies within the Plain of Perfect Numbers.

We just now realize that 1024 is  $42 \times (22 + 10^2/42)$  for what it is worth, but as for  $(3N + 1)$  the inner cavern shows us that 1024 naturally has a direct doubling line to One(1) that intersects with 42 and 21 at the number 64. The iteration value for 341 is 12 with a  $\max(N)$  of 1024.

As we drift slowly, pulled forward by the steady current in the narrow iridescent inner canal, a blinding light flashes before us. The current speeds up, heaving us forward. As our eyes adjust, the light striates into a curtain of cascading numbers. The undulating luminous curtain is thick with steady undulating streams of doubling numbers, and it roils the river below, rocking our canoes from side to side, banging them into each other.

Every odd number is doubled, making them even, then doubled again and again as it flows downward and spreads out. With our canoes in free spin, we slip into the pulsing cascading curtain and are engulfed within the swift current, the numbers slipping onto and into us.

The numbers get finer and finer, filling us with tiny numerical particles of light. Our canoes tossed to and fro they pile up upon each other, and we tumble out, twisted, battered.

The curtain is gone, the inner river is gone, the cavern is gone. Behind us nothing but a tall sheer granite cliff with a broad mountain towering above it.

Our eyes better adjusted to the brightness of this new plain and landscape, we see the curtain again. It has become a thin veil encircling us, forming a wide perfect circle around us. On the circle is the number 1 followed by every odd number, more and more of them as the circle widens and the “physical” size of the numbers shrink within our perception. Then those numbers double and hang down beneath them, then double again and again as the circle rises to accommodate them. We see a zigzagged line connected all those doubled even numbers, from 2 to 4 to 6 back to 8 forward to 10 back to 12 and so forth, zigzagging around the widening circle. As the circle widens, those zigzagged lines flatten out and merge with the circle, with

---

those even numbers settling into their respective proper places within the natural integer sequence. Standing in the center of the expanding ring we feel the pull of each number, each merging with our minds, empowering us, leaving us with the thought that if we can control and manipulate the numbers, we can control our minds and the simulation they are integrated into. As the circle continues expanding into infinity, we are reminded how Abraham's *Sefer Yetzirah* described the paths between the *sefirot* as infinitely large circles with no beginning and no end.
