The Simulation

We have stated that in all probably we exist inside a simulated world. That world may be one of many simulations within simulations and that the ultimate simulation is in the mind of the Creator. Or we may indeed be in a first generation simulation within the mind of the Creator, and still be one of millions similar parallel ones. The Zohar, though, has told us that we were not the first generation simulation; we were not the first world the Creator emanated by far. And moreover, our emanation is the lowest level, with many levels of emanations and/or simulations above us to climb up and into, sequentially. It is not just the Zohar that tells us this; many ancient teachings from India and elsewhere say the same thing in their own ways.

If there is a soul, an afterlife, a world to come, then this world we find ourselves in *is* a simulation, just a step in a cosmic process. The advantage of an actual simulation is that there is a mechanical, algorithmic way out.

Even if this were not true, Man would eventually organize himself into a simulation, as evidenced by what we have allowed to happen to ourselves in the last decades. Whether this is Man's innate nature, driven by the kernel of knowledge that we already are in a simulation, or wholly the desire of the opponent, the evil inclination, to control and reorder our universe is hard to say. Maybe it is the opponent taking advantage of Man's innate nature. Either way, for most people reality no longer exists, and little is being done to resist the takeover. Industry, Finance, Education, and Government are in the hands of the Titans and has been so for decades. Man was seduced and became addicted to everything they produced: their products, their credit, their media, and their welfare and regulations. By the way, the Torah warned us this would happen before the time clock even began with the seduction by the snake that began in verse **57** and ended in paragraph **10** with verse **78**, when Adam and Eve stood fully clothed and time and their journey began.

As the Titans centralized their power, they convinced people that Totalitarianism was freedom.

We think we have 1000 different sources of news, and that that is freedom, while the truth is all 1000 sources are receiving and recirculating the same state sponsored news-feed of make-believe reality. There are 1000 university choices and private and public education, yet all are spewing the same false narratives. Over decades independent thought and opinion was systematically stymied and removed. In any hierarchical system where rewards, perks, and punishments are doled out from above you just need to control and influence the top echelons and you will eventually control the entire system.

History is being rewritten so fast in textbooks and on the internet that soon it will no longer exist. Nothing gets published or disseminated anywhere anymore if it is not approved by the upper echelons, forcing those who can still think to regurgitate the narrative or perish. We know of history only because someone told us about it. If they make up a new one instead, that will be our new version of history. What happens to actual history? It disappears forever. There is more truth in what you recall from your youth than in the new theories and discoveries that have been unearthed with more recent scientific advances. At first, social media was a feedback loop telling you what you wanted to hear and a fabulous way for you to divulge all your innermost secrets to the universal database. Now that it can read you like a book, it just tells you what it wants you to hear, manipulated to fit a specific narrative.

Only a few decades back, people used to interact with one another directly. Now a large percentage of the population work from home, have their food delivered rather than dine out, shop at their desks or on their phones, rather than in stores, and listen to their teachers on zoom. Nearly all our correspondence, social interaction, and even conversations are digital and thus exist only in the digital world filtered through the massive server warehouses of the Titans' universal database.

Algorithms feeding off that database manipulate you into buying what they want you to buy; dating who they want you to date; and seducing you into whatever they can best control you with, including sex, drugs, easy credit, and even fake illnesses so you will buy their drugs, therapies, and harmful vaccines. Hospitals and health associations dictate how doctors act, or they lose their accreditation. Doctors prescribe and diagnosis based on what they are told, or they lose their hospital privileges and jobs. The CDC and Johns Hopkins independently analyzed the data and showed that there have been almost zero deaths actually attributed to covid-19, yet at \$39,000 per death, hospitals and their doctors keep churning out death certificates and fear mongering to perpetuate the false narrative. Every heart attack, stroke, influenza, pneumonia, and accidental death from 2019 suddenly became a covid death in 2020—no net change. They tell you what to think and guide you as to when to think it. They tell you who to vote for and if you do not, they change your vote anyway, right in front of your face and with impunity.

Virtual sports are soaring in popularity while real ones are limited to empty arenas, prohibited at colleges and schools. Even the entire concept of competitive team sports was a way to distract and manipulate us. Now they want to replace that addiction to competitive rivalries with competitive warring factions. They have already replaced the innocent entertainment component with heavily induced gambling and fantasy sport betting. Sports talk radio is now 90% about the point spreads and the fantasy player values.

You have worked your whole life, were convinced to buy a house with a mortgage, a car, etc. on credit and you have your savings invested in booming financial markets around the world. Who

owns your house, your car? Where is your money? It is all digitized and circulating around the depositories of the Titans. What you worked for and work for everyday is not yours to control. What if you could not get insurance because you communicated an independent thought; what would happen to your mortgage, loan, etc.? Moreover, what you were urged to consume your whole life, instead of saving and squirrelling away, is all gone, nothing to fall back on. You are not alone; everyone is in the same sinking ship. All you have is a paper slip saying the money in the bank and in the market is yours. What if one day you were told no, it belongs to them, just like all the work, content, emails, and personal and private info and pics you stored in the cloud or in your phone, which is the same as the cloud?

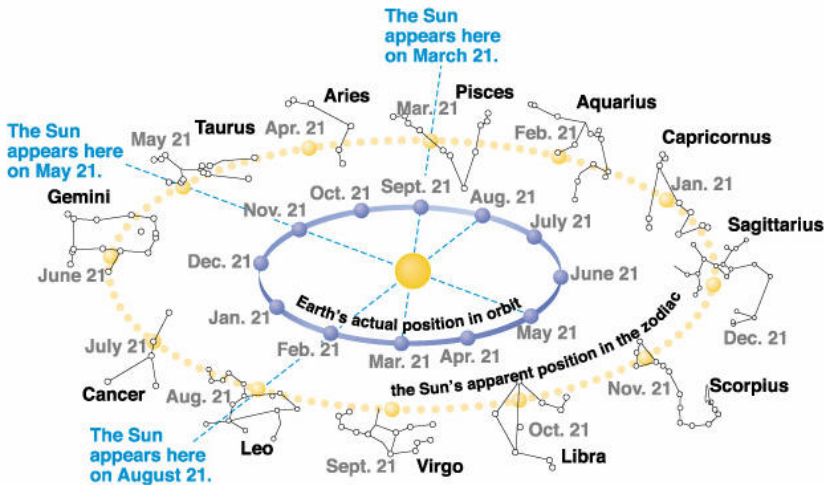

Basically, you are a slumbering human battery in The Matrix, or just one step removed from it. And this is just phase one of their conversion to a simulated society. If they win, phase two will be in weeks. So, what is the difference if you are in the Creator's simulation or one designed by man? The Creator gives you a way out, a fighting chance. For anyone that has not been following this series from its inception, you can find the [entire work here](#).

Time to Move On

Enough of the Pyramid. We have firmly established the validity of its measurements and ratios. It is time to view them as universal spatial-time constants. Notably 27.5; 12; 10; 11; and 27.5/12; 12:1; then 2×27.5 or 55; $11/10$ or 1.1; 27.5^2 or 756.25; 12×27.5 or 330; and $27.5 \times 5 = 137.5 =$ the Phi(?) angle; and Pi(?) and Phi(?).

The Torah gives us these fundamental concepts written on Parchment, but really, they are written in time, an endless story drawn out over thousands of years, a written history unmanipulated by man. The specified ripples in time ride on a sea of cosmic technology that connect them and connect them to the greater universe. The Pyramid gives us the fundamental concepts and constants written in stone, representing physicality. The Cosmos gives us them written in space. While the universe gives them to us written into the Ether, counterspace. These are the four real elements: Ether, Time, Cosmos, Physicality; the *YHVH* (????). Fortunately, despite the best efforts of the opponent, all 4 survived and are still with us today in our world. Bear in mind that our nomenclatures are deceiving and limited. For example, Time is a construct, not something followed linearly.

12 Hours in a Clock

Jacob had **12** sons, which gave rise to the **12** Tribes of Israel. This is a core element of the Torah and of universal harmonics, which is why we find it repeated throughout the 4 elements delineated above. Around 3760 years ago, Abraham Avinu was shown the dynamics of the greater universe and conveyed them to us in his *Sefer Yetzirah*. He explained that there is a cosmic hierarchy and that the **12** Tribes were subservient to the **12** Constellations and that they were subservient to the **12** months, and that they in turn to the **12** combinations of the *YHVH* (????). It is by multiplying or dividing by **12** that we understand. Do not think of them as **12** under **12** but as expansions of **12** surrounded by **12**, in the way that a sphere or point in a cube is surrounded by **12** edges, which the Zohar calls both columns and directions.

The Ark of the Covenant

The Torah gives us the Ark of the Covenant as measures of length, width, and height, most notably all with a half measure (**2.5**, **1.5**, and **1.5**) cubits, respectively. Every half cubit is **13.75"** or the Phi(?) angle (**137.5°**). This half cubit x **12** is (**13.75 x 12**) = **165**. It is through expansion that we understand. It is by multiplying or dividing by **12** that we understand. As we saw in the previous chapter, the square of **165** by **165** gave us the **72** squares. The sum of the **3** measurements is (**1.5 + 1.5 + 2.5**) = **5.5**, and the sum of the measures in inches is **151.25** or (**2 x 75.625**). You should be getting the point and see why we started with the Pyramid, the element of physicality. These are universal spatial-time constants, but only for those that understand. We are not trying to understand the laws of physics that govern our world, but those that govern the greater universe, including the hyperdimensions. It is important to remember where **55** came from: the sum of 1 – **10**, ten bundled dimensions/*sefirot*.

The sum of the digits in the Ark of the Covenant's measurements in inches (41.25, 41.25,

68.75) translates to $(12 + 12 + 26) = 50$, as in the **50** Gates of *Binah*. By utilizing this gematria/number theory window into the next world, we can understand that the **12** edges and **26** elements (edges, vertices, and sides) represent spatial and hyperspatial cubes. There is the central cube of **26** expanded outward into *Zeir Anpin* and then *Binah*. This is why the Ark of the Covenant consists of **3** layers: gold, acacia wood, and gold.

As for the volume of the Ark of the Covenant, it is $(1.5 \times 1.5 \times 2.5)$ cubits³, which is **5.625** x **27.5**³ inches³. The different between the sum of the measurements and the volume in cubits³ is $(5.625 - 5.5) = .125$ or $1/8$, possibly another hint at *Binah*.

Moreover, when the Ark of the Covenant is situated in the Holy of Holies, it occupies **.000703125** of the chamber's **8000** cu³ volume. Therefore, we could fit **1422.222...** Arks inside the Holy of Holies, which is $(2000 - 1422.2)$ or **577.8**. In cubic inches **1422.222... = 29577777.78**

Of course, the Holy of Holies **8000** cu³ volume is akin to the **8000** value of the **8 x 8** matrix within the **72** Triplets. Of further note, the **100** cubit tall Future Holy Temple stands an additional **80** cubits above the **8000** cu³ Holy of Holies.

The volume of the Ark of the Covenant is **5.625** cubits³ and **5.625** = **.009** x **625** (*H'Keter*) or **.009** x **5**⁴. Moreover, **625** is also the square root of **390,625**, the number of words, letters and verses in the Torah that goes into the Ark *perfectly*. As explained at the outset of this series, **390,625** is exactly **5**⁸. The word for the Ark (????) has a value of **256** or **2**⁸, representing an **8**-fold expansion of **2**. The **625** remainder from **5.625** and **390,625**, also alludes to $1/.625 = (2 \times .8)$. Meanwhile **256** and **625** have permuted digits, and **.625** equals the ratio **5/8**.

Comparing the **5.625** and the **390,625** volumes of the completed, or fulfilled, Ark, we may separate out the common *H'Keter* **625** component and divide the residual **390** by **5** to get **390/5 = 5(80 - 2)**, which is reminiscent of the $(80,000 - 5^2)$ words in the Torah.

The volume in each cubic cubit is **27.5**³ inches³ or **20,796.875** inches³, which is **3.125** less than **20,800**. This is curious, not so much because **208** is the gematria of Isaac, but because **20,800 = (26 x 800)** and moreover, **3.125 = 100/32** or **25/8**. Of course, **3.125** is just **6.25/2**, referencing (*H'Keter*) and the Ark to Holy of Holies ratio.

There are 3 common components in the resultant values from the Ark of the Covenant: **208**; **20,800**; (26×800) ; **25/8** or **5²/8**; **5(80 - 2)**; $(80,000 - 5^2)$; **5/8**; **2**⁸; $(2 \times .8)$; **5**⁸; $1/8$, **50**, and **5.5**. All are derived directly from the numbers **2**, **5** and **8**. The **2** and **5** represent the **10 sefirot** of the Tree-of-life cleaved down the middle, **5** on one side, **5** on the other, and thus also the Covenant of Halves between the Creator and Abraham. The number **8** here is *Binah*, the hyperspace dimension beyond physicality.

The volume of the Ark of the Covenant is **5.625** cubits³ which works out to **116982.4219...** inches³ and/or **67.698...** feet³. The sum of the **3** measures in feet equals **12.6042**, which is reminiscent of the design of the Essential Cube of Creation. Meanwhile, the ratio of the Ark's volume in cubic inches/cubic feet is **1728.00...**, which is **12**³. The value **1728** is also (8×216) and (24×72) , as in the **216** letters in the **72** Triplets. Wherever we see the **72** Triplets, elements of the **42**-Letter Name are not far away. Thus, the numerical value of the Ark (????)

in gematria *sofit* is **906**, the same as the 7th and final line of the **42**-Letter Name Matrix (??????). Moreover, by covering the Ark in gold, of numerical value **14**, inside and out, the Torah may be alluding to the Upper **14** Triplets of **42** letters of the Name of G-d and the **14** Triplets of **42**-Letter Name.

Granted this **1728** or **12³** connection is due to the universal spatial-time constant of the ratio of the foot to the cubit, and yet we find that the product of the digits in the total gematria of the Torah (**2*1*0*0*9*8*2*6**) also equals **1728**, which may mean the Torah was designed to exactly fill this **12³** spatial-time continuum.

Further analyzing that gematria total we see that:

$$^4\sqrt{(P_{(21009826)}/Q_{(21009826)})} = ^4\sqrt{(1728/28)} = 2.802828$$

This is not so dissimilar from the square root of the exact number of words in the Torah: **282.8002828**. Perhaps, like the **28** Letters in the Torah's first verse and the **2** layers of gold, the **28** in these equations represent the **28** Triplets in the necessary fusion of the **2** Names of **42**. After all, as the Arizal explains, both Names work in tandem. The **72** Triplets would complete them in that (**14 + 14 + 72**) = **100**. **That would leave 12** Triplets to complete the **112**.

Meanwhile, the square root of the total gematria *sofit* value (**33640626**) of those same 304,805 letters in the Torah is **5800.054**. The **336**, as in the **336** letters in the **112** Triplets may be coincidental, but we once again we see the numbers **2**, **5** and **8** again embedded into the Torah's full gematria values and in pretty provocative fashion(**5800.0**), along with the number **54** that is associated in the exact same way (**1000.054**) with the **72** Triplets square roots, and with the conversion of the natural *Alef-bet* split to the Phi(?) split, and moreover, with the Essential Cube of Creation.

The Cycle

Every year, we read the entire Torah then cycle back again to the beginning. It is **54** portions. Since the quantity **54** guides the *Alef-bet* shift to the Phi(?) proportion, there must be a profound relationship between dividing **54** by **3** to get **18**, and the circle-phi equation $495^\circ/27.5 = 18^\circ$ and with the angle $18^\circ = .3142$ radians or $1/20^{\text{th}}$ of a circle (360°).

The value **54** comes up again in the cycle of **5778**, as **5778** is the **107th** Triangular number and $5778/54 = 107$. As previously discussed, the Torah hints at this connection in the **54th** Paragraph of the Torah at the **107,007th** letter, the exact moment that we received the **10** Commandments, in Exodus **20:2**. They begin with *Anochi YHVH* (?????????) "I am G-d" of numerical value **107**.

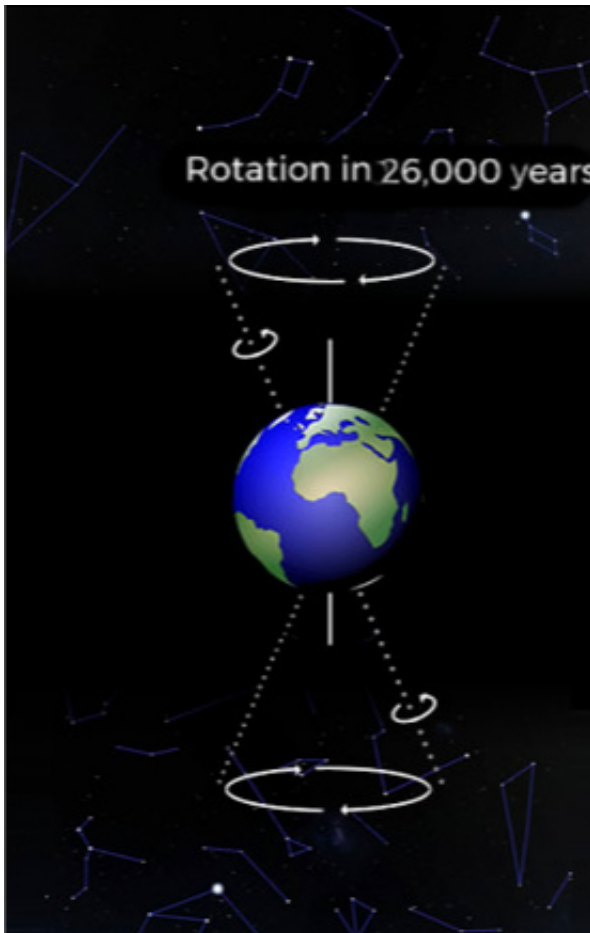

The **10** Commandments consist of **620** letters, **62** of which are *Yuds*(?) of numerical value **10** each. The ordinal value of *Anochi YHVH* (?????????) "I am G-d" is also **62**. The value **620** is that of the highest *sefira*, *Keter*, and of the word *esrim* (twenty). The Creator is sending us a clear message. When the cycle reaches its highest point at the **5778** year mark, it is *Anochi YHVH* (?????????) "I am G-d" who decides our fate.

Of course, it is man who decides his own fate by his actions. The Creator issues the verdict.

The cycle that began with **45** has ended **5778** years later with **45**. Much rides on what happens over the next few weeks. Which reset will be enacted?

It is understood that $\text{Phi}(?)^{18} = 5778.000$ and that there are **3** numerical strings ...**5778**... within the telling first **1000** or 10^3 digits of Pi, which brings us back to $54/18 = 3$.

The Great Precession

Over the **5778** year span we read and recite (5778×54) portions, which works out to a total of **26,001** portions per each of the **12** progressions through the great precession. Think of a giant cosmic clock. Each hour contains $(5778 \times 54)/12$ or **26,001** portions. Then within each of those great hours is a full precession of the equinoxes of **26,001** years, which in turn go through their own **12** hour cycle through the constellations. And each one of those years goes through a cycle of **12** months. Three (**3**) iterations of **12**, expanding to 12^3 . Or contracting, with the power increasing by **12**-fold on each level. It works out to $(5778 \times 54)/12 = 26,001$ portions per progression, and $26,001/12 = 2166.75$ portions per constellation and $2166.75/12 = 180.5625$ portions per month, which brings us back to **18** and **5.625**, the volume of the Ark of the Covenant. If we keep dividing by **12** another two times for a total of **5** times, the result is **1.25390625** portions or **125**, as in 5^3 , and **390625**, as in the words, letters, and verses in the Torah (5^8).

The **5**-fold expansion of **12** is equivalent to 12^5 , which equals **248832**. The resultant value **248832** alludes to the **248** dimensions of the **E8** Lattice structure of the universe, to the year Moses died, **2488**, and to the **832**-year period that the first two Holy Temples stood (**422** and

410 respectively), representing exactly **1/4** of the time period between the giving of the Torah at Sinai in **2448 HC** and **5778 HC**.

Moreover, as discussed in Chapter 17, the Third Holy Temple's Central Altar has a base of **32** cubits squared and rises **10** cubits to the priest pathway, a square of **26** cubits per side. The connection between **26** and the *YHVH* (????) and between **32** and the **32** elements (**22** Pathways and **10** *sefirot*/dimensions) of the Tree of life, etc. has been firmly established, so the incorporation of these key measurements is not surprising, yet **26 x 32** equals **832**.

This **832**-year time period also stretches from the construction of the First Holy Temple in **2928** HC to **3760** HC, the pivotal year "0" chosen for the Gregorian calendar, meaning that the First Holy Temple was built in **-832 CE**. It is also the **832** years from the beginning of the Flood in **1656** to Moses' death in **2488**. Moreover, the (**3760 - 832**) or **2928**-year period represents the number of years that we have not had the Temples from the Covenant of Halves in **2018 CE** to **5778**.

As we now know, **3760**, **2018** and **5778** are the dimensions of our Spherical Time bubble.

Why (**248 + 832**), as in **248832**, equals **1080** or (**20 x 54**), as in $1/20^{\text{th}}$ of a circle (360°), where we began the revelation of The Cycle, is a mystery. It is just hyperdimensional mathematics at work. The same can be said for that same **1080** being the amount of parts of a minute in **1** hour.

The Physical Cycle

There are **3** similar numbers given for the Earth's precession on its axis, the precession of the equinoxes. The first is **26,000** years. This cosmic declaration of the *YHVH* (????) is obvious through the value **26 x 1000** (*Binah*). This **26,000**-year value, though, may be more symbolic than actual, though the $(5778 \times 54)/12 = 26,001$ portions certainly is not. We can ask why **26,001** and not the seemingly perfect **26,000** that man would have come up with? Like the Torah's first verse at **2701**, and the **42**-Letter Name at **3701**, the addition One(1) maybe the Creator's calling card and an easy hint that Oneness and Love are all-important to releasing the power of the **54** portions and to conquering Spherical Time.

The second value given for this precession or great cycle in relation to the stars/constellations is **25,920** years. It is **81** years less than **26,001**. This has been the more precise scientific measure universally recognized until most recently. It has also been the Yuga cycle calculated in ancient India. It is also the measure of our clock. You see, **25,920 = 24** hours x **60** minutes x **18** parts of a minute, which is how we count time in Hebrew. The great cycle is thus equal to the parts of a minute in a single day. One year of rotation for each part of a minute in a single day. You may have wondered how the world could have been constructed in 6 days. Obviously, time is elastic in the hyper-dimensions and our limited definition of a day is not the same as the Creator. We can now easily understand that a day can be **25,920** years long. And every fraction of a minute, every **3.333** seconds, is connected to an entire year within the precession or great cycle.

Pondering the source of Spherical Time with Phi generating a new time path with every **137.5°** turn upon the circle, we can now see how a single day of our time can contain **25,920** yrs x **365.256** days x **24** hrs x **60** min x **18** parts of a min or 10,224,830,362 different time paths. That is with the Spherical Time clock turning once every **3.333** cosmic seconds, or **495°** in **10** cosmic

seconds.

Remember, as explained above, the cosmos count time in the hierarchy of **12**'s and the value **25,920** is also equal to **12 x 2160**, the diameter of the Moon, which is thus equivalent to **120 x 216**, the age of Man times *Gevurah* (**216**), Judgement. There are also **216** letters in the **72** Triplets. Indeed, the precession advances **1°** every **72** years.

Fortunately, we have learned that those **72** years can be thought of as a radian in the great cycle and if the phi-clock turned its **495°** or **1.375%** in those **72** years. It would turn **495** rotations over the **25,920** year cycle. Each of those **495°** cycles, as discussed in the last chapter, equal **2.75?** radians so let us examine what happens over that **72**-year span. The first step is to divide **72/2.75 = 2.61818** or approximately $\text{Phi}(\text{?})^2$. Next, we divide that result, **2.61818/?**, which equals **8.333...** or approximately **1/.12**, the universal constant of time.

What this means is that the **25,920** year great cycle is the measure of **1** cubit times $\text{Phi}(\text{?})^2$ for each degree of the circle (cycle), with $\text{Phi}(\text{?})^2$ as **2.61818**, the relationship of **72/2.75**:

$$27.5^{\text{?}^2} \times 360 = 25,920$$

The cubit is space. The cycle is time. Space and Time interact. The circle is guided by the $\text{Pi}(\text{?})$ field. It is the interaction between the $\text{Phi}(\text{?})$ field and the $\text{Pi}(\text{?})$ field that creates the infinite pathways of Spherical Time.

$$12 \times 2160 = 25,920$$

The great cycle of **25,920** years is **12** times the diameter of the Moon (**2160** miles), one Moon diameter or Moon sphere for each great hour of progression. The mile is space. The Moon is physicality. The cycle is time. Space and Time interact.

The diameter of the Moon is measured in miles and each mile must be **5280** feet for it to work out the way it does. Some harmonics are ratios independent of what unit of measure is used, like the **111** Moons that span the breach between the Earth and the Moon itself. Thinking about that, including the Moon, that makes, **112**, as in the **112** Triplets.

In the last chapter we saw how the **5280** ft mile was incorporated into the element of stone. The Torah gives us the info and power written in time. Earlier in the series, we saw a glimpse of that, yet we did not associate it with time. The Torah is purposely divided into **54** specific portions, each attuned to **1/54th** of the cosmic clock. The **12** Tribes, we now understand, are associated with the **12** hours of the cosmic clock. The 2nd Book of the Torah ends with the twin portions of **57** and **78** verses respectively. The next portion is *Bamidbar* 1:1 – **4:20**, in which the Israelites are being counted. The total count was **603,550**. The next census, taken at the end of their journey, shows their ranks as **601,730**. If we add the two, we get:

$$(603,550 + 601,730) = 1,205,280 = (1200000 + 5280)$$

12 Hours and **1** mile. Time and Space.

As for the Ether, we already covered how the sum of the *Alef-bet* with its **5** final letters: (**4995** +

$280 + 5) = 5280$.

And as for the Cosmos, $(25,920 + 5280) = 31200$, as in the **312** cubit measure of the Future Holy Temple's Outer Courtyard, and (1200×26) .

Each Moon covers an arc of 30° of the great cycle or (30×72) years or miles. Years and miles become interchangeable. The radius of a circle of **25,920"** would be **300.0** cubits. Of course, the great cycle is measured in years (time) not space, so a radius of **300.0** cubits and a diameter of **600.0** cubits is metaphorical and metaphysical. Just as the **600** choice chariots that the Egyptian lost in the Endless Sea and the **600,000** Israelites at Mt. Sinai and the **6000** years to *Moshiach*. There is also the Log of **600,000** being **5.778**, and the Spherical Time equation $((5708 + 1948) - 1656) = 6000$.

The Torah tells us our existence or consciousness has been in existence for only 5778 or 5781 years and yet we are given a **25,920** year cycle with which to ponder the hierarchy of time. In *Binah* hyperspace that arc of time is a concept not a measure to be counted out. Moreover, we need not live that span to calculate it or to discover the concepts. The Greeks did it in a few years, as they did in ancient India, by tracking the stars in relation to the Earth and projecting it outward.

Raising the value **25,920** by an increment of **12** again gives us $(12 \times 25,920) = 311040$ and $311040/54$ portions = **5760**, equivalent to the year **2000** and **18** years less than **5778**. Those **18** years are equivalent to $(12 \times 18) = 216$ months, a period of judgment.

Interestingly, **25,920** is $(54 \times 12 \times 40\text{-year/day period of maturation})$, which equals (54×480) , while $26,001/54 = 481.5$, yet another reason we started in stone before moving onto the cosmos.

Like election votes, many long standing scientific measures were changed in the last couple years. History and science are only as good as those that are allowed to chronicle it. You can rest assure that whatever is critical is being changed. There are so many reasons this world is called the world of illusion.

The latest measure they now have for the precession is **25,772** years. The value **.5772** is Euler's Constant and **5772** was the combination of the 2 frequency scales of **1.1** and **27.5** at the phase integer **110**, yet remarkably **25,772** is **229** years less than **26,001**, yielding us the universal ratio **27.5/12**.

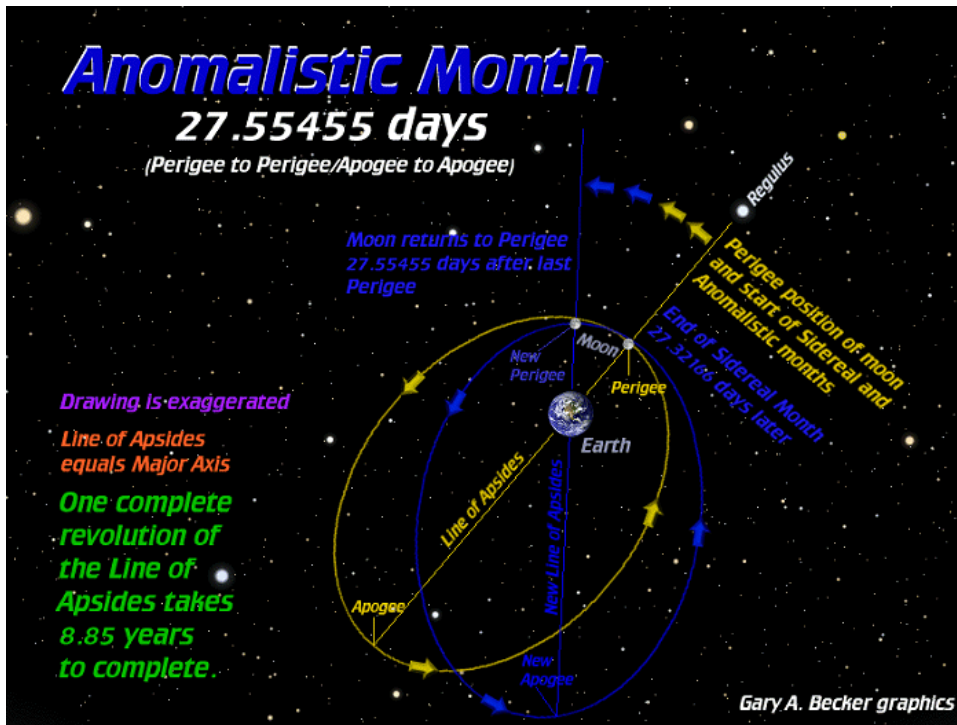

The **229** years, analogous to the **27.5/12** universal Space/Time constant (**2.29**) is also the complete gematria value for the Name of the Patriarch Jacob (????), $(182 + 47) = 229$, who had the **12** sons.

Since the Earth's tilt on its axis varies with time, we can sit around for 26,000 years to see which number is correct, or we can take each of the 3 measurements as divinely inspired in their own way.

The Anomalistic Year

1 foot = 12 inches

1 year = 12 months

As the Moon orbits the Earth it is not exactly a circular motion, but an oval, and each monthly orbit around the Earth, there is a point where the Moon is closest to the Earth. At that point it is actually moving faster than at any other time. When we speak of months, there are different perspectives. There is the sidereal month, which is how the Moon would be observed against the background of the stars, rather than our perspective from Earth. That sidereal month is approximately 27.32 of our days long. Since the Earth itself is independently moving at 66,600 mph around the Sun, the Moon must travel farther just to keep up with it, as it completes its orbit around the Earth. Thus, what we observe as we watch the Moon go through its relative phases is that it exhibits a slightly longer month of 29.53059 Earth days. The anomalistic month is yet another variation. It is the measure of the moon's quickest motion to the next occurrence of that quickest motion; in other words, whenever it is at perigee or closest to Earth. This average interval of successive perigees is **27.555** days.

One could say that the anomalistic month, **27.555** days, reflects both one (1) and two (2) cubits (27.5 and 55 inches respectively), and with the full 27.55455 days the time period further connects to the **455** total of the 3 aspects of higher Name *Ehyeh* (????). The anomalistic year works out to 12.0085 months, so **5778** years in terms of the anomalistic cycle is **5782.10** years, and **3760** years would be **3762.67** years, an additional **2.67** years. Two (210 and 267) more reasons we started with the element of stone, physicality, if you want to connect the dots. On that theme, **5775** would be 5779.100 years. The difference between the anomalistic resultant years and **5778** or for that matter **5775** years is **4.10**, as in **410**, the first Triplet in the *Shema* (???)

1 foot = 12 inches

1 year = 12 months

1 An. month = 27.5 days

1 cubit = 27.5 inches

1 year = 12 An. Months

27.5/12 = Universal Space/Time Constant

The Cosmos write the universal constants Space/Time Constants in space.

The Earth Orbits the Sun

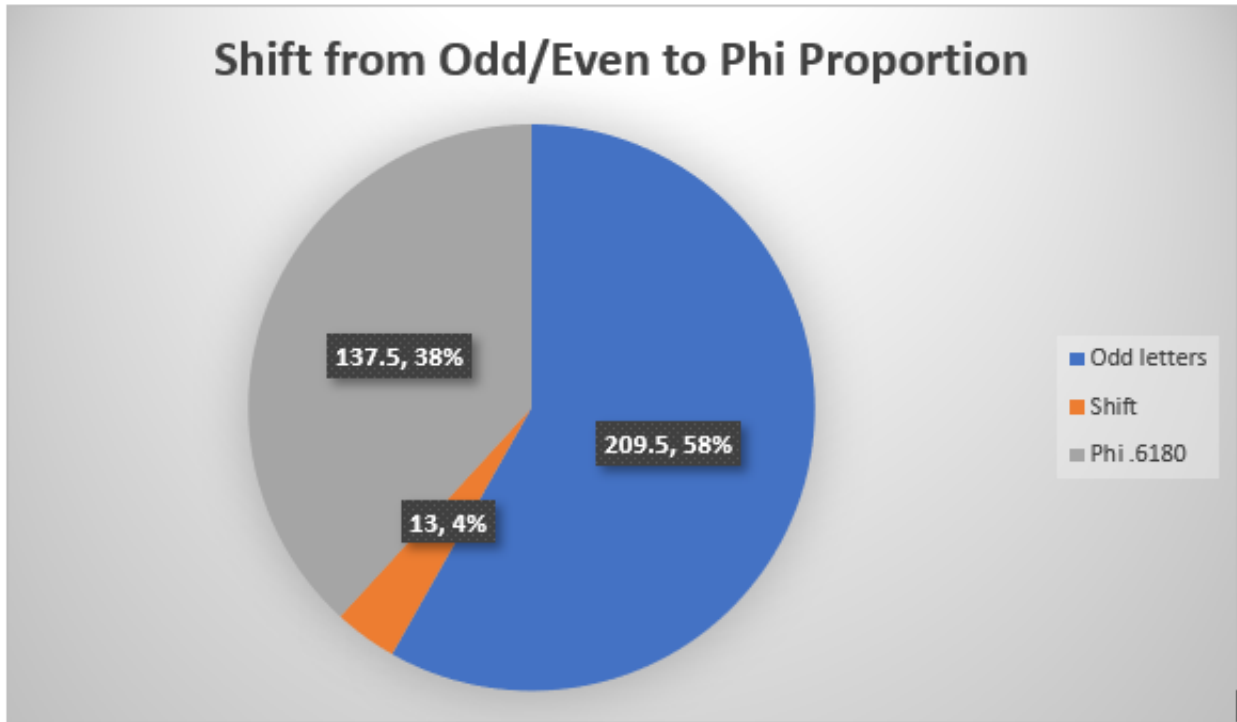

The same holds true for the Earth orbiting the Sun. The Earth's perihelion (or closest point to the Sun) moments vary widely every year (every cycle) within a 4.5 day variance. Thus the perihelion moments also vary when plotted on our calendar, but occur around Jan 12th each year, about 3 weeks after the winter solstice. In **2018 (5778)** that perihelion interval was **363.636** days, or *H'Moshiach* in gematria. In 2020 it was 367.10 days. In 2021 it will again be **363.25** days.

Back to the Beginning

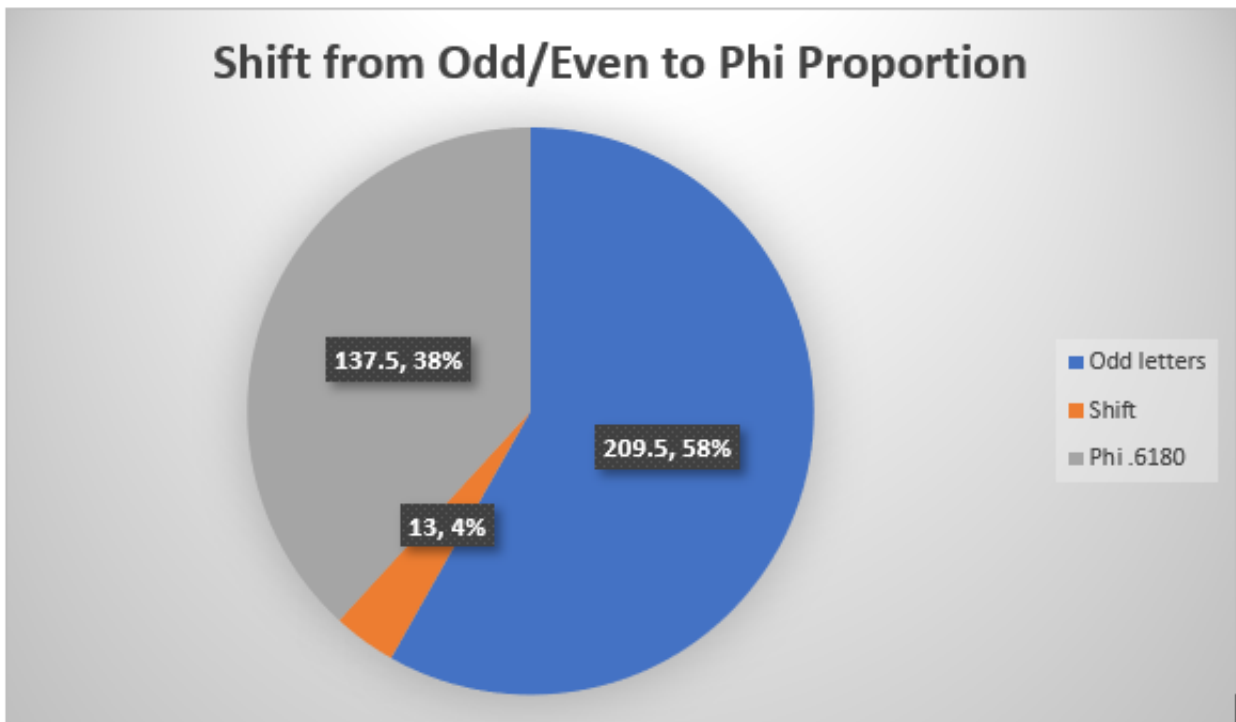

There is a reason the number **54** keeps coming up for us. There is a reason it is at the heart of the Essential Cube of Creation. There is a reason the primordial shape of a circle is essential to Spherical Time and keeps coming up. That reason was given to us in one of our first clues, the first critical clue. That reason was also given to us as our deepest clue in our last chapter as well.

Comparing the Phi(?) proportioned *alef-bet* to the natural odd-even split we saw that it is an exact

shift of **54** units from the Phi(?)split to the Odd/Even split.

And that that **54**-unit shift is a **13°** shift on a circle:

The Shift from Odd/Even to Phi(?) Split:

Value	Percent	Degree
571	38.4%	137.5°
54	03.6%	13°
870	58.0%	209.5°
1495	100%	360°

Phi(ϕ) Split:

Value	Percent	Degree
571	38.4%	137.5°
924	61.8%	222.5°
1495	100%	360°

Odd/Even Split:

Value	Percent	Degree
625	42.0%	150.5°
870	58.0%	209.5°
1495	100%	360°

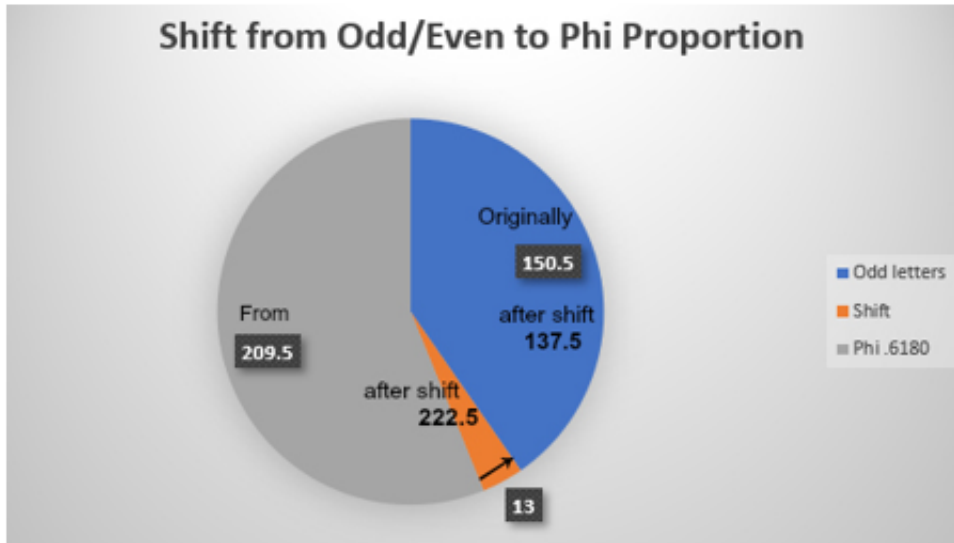

We also saw that the greater Phi(?) angle, **222.50°** less the smaller odd/even angle, **150.50°**, is equal to **72°**, which was also the proportion of the smaller odd/even split to the larger one: (**625/870 = 72%**).

Greater Phi angle **222.5°**

Smaller Odd angle - **150.5°**

72°

For no apparent reason, which means the reason lies in hyperdimensional mathematics, the shift of **54** units, or **13°**, caused a **72°** relationship to appear among the proportions and their resultant circular projections.

The sine of an angle of **54°** is also connected to Phi(?).

$$\sin 54^\circ = \frac{\varphi}{2} = \frac{1,618003399}{2}$$

This may be a good time to remind ourselves that the numbers associated with the letters in the *alef-bet* are designed to fit along the exponential curve given by the number **1.313**.

One of the reasons **54** keeps coming up for us is its relationship with the number **13**, the gematria value of *Ahava* (????), meaning love, and of *Echad* (???) meaning One. We just saw in Genesis 3:3 that the secret of the Tree in the middle of the Garden of Eden was found in its initials: *Ahava* (????), love. The secret of the Tree-of-Life is Love.

That is a deep secret, yet not surprising to anyone who studies Torah at almost any level. It is also one rarely taken to heart. In order to activate the Triplets and the Ether that supports them we need love in our hearts. We could call the Ether magic or the force of magic, but that would be a definition derived from our limited understanding. It is a force that needs to be activated for *Moshiach* Consciousness to prevail. This is not the force behind practical or black magic. It is

the force that powers the Hebrew Letters and Names to do positive actions in the physical realm. It is what the fields react with. Once activated, it will prevail in strength for 1000 years of our reckoning. This is the great Shabbat. This is the promised hope.

It was strong in the beginning of time but waned with our dependence on physicality and man's embrace of evil. Once it declines past a specific level, our world reaches a tipping point, and the reset is triggered. There is a reason we were told **13** is unlucky and to be avoided.

It can be re-activated in an instant. People of a more righteous and more connected nature will be able to access this magical Ether to varying degrees with the true *tzaddikim* at the top of that list. Physicality will be of much less importance to everyone connected. The breath of love that binds us will be strengthened. Life will be much easier, and we will be able to taste from the fruits of true pleasure rather than those of physical desires. The majority of people will not make the cut, though. Having failed to achieve the minimum goals in the allotted time, they will be reset, wiped out of the system. Having shown an overwhelming preference for evil and the desire for physicality, they will get what is in their hearts.

It is not coincidental that Adam and Eve gave birth to the lineage of Abraham and Moses after **130** years. Seth had to have been born in love, and we had to receive this message. The *Alef-bet* had to be born with love and Oneness (**1.313**). And the Torah had to be born with love and Oneness in **1313** BCE, with Wisdom (**73**) from the Heart (**37**), as its luminous first verse has a gematria of (**37 x 73**), split into (**19 x 37**) and (**54 x 37**), the last **2** words and the first **5** respectively. The year **1313** BCE or **2448** HC is (**45.333 x 54**). With everything cycling in **12**, it is not a coincidence that **37** is the **12th** prime number.

The Masks

One of the many devious plots of the NWO in their attempt to preempt the true great reset with their own “great reset” has to do with the face masks. Besides the fact that all scientific evidence suggests they are essentially useless in preventing the spread of illness, especially viruses, and that they, in fact, increase the breeding of bacteria and cause other biological ills for people, the *Arizal* has advised us of one of their most devastating consequences. The Hebrew word for “Breath (???)” has a numerical value of **37**, which he likens to “The Heart (???)” which is a direct permutation. He further explains that the life-force flows from the heart through our breath. By wearing masks, all the life-force flowing from our hearts is blocked before it can reach out to one another. All the heart warmed life-force between people is choked off, helping to generate as much hatred in society as possible. Imagine what these deviants are

doing to an entire generation of children deprived of social interaction and the inner love of family, friends, and society.

By the way, this sharing of the life-force flowing from the heart is why people enjoy kissing. The chemical and electrical reactions in our brains are secondary. This is the true intimate sharing from the heart; all the rest is sex.

Another way the Hebrew word for “Breath (???)” is used is as a Torah Utterance. In preventing and prohibiting religious gatherings the NWO, another name for the Titans and their age-old plan to place *Malchut* above *Keter*, has minimized Torah Utterances into our environment. One of the problems with the NWO’s attempt to preempt the true great reset with their own “great reset” is that it would preclude the possibility of *Moshiach* Consciousness and the Great Shabbat from happening. And if allowed to proceed, this would prevent the recycling of the generations and thus trigger the crashing and implosion of the Spherical Time bubble once and for all.

A Pronic Path

With all the pronic numbers we found associated with the exodus from Egypt lined up in a single linear pathway through the square spiraling matrix, including **42** and **72**; **210** and **756**, the **14th** and **27th** pronic numbers respectively; **110** and **156** (Joseph) and **182** (Jacob), the **10th**, **12th** and **13th** pronic numbers respectively; and **380** (Egypt); it is not surprising that the numerical value of *Shabbat* (???), which is **702**, is the **13th** even pronic number and **26th** overall one. The one associated with Love and Oneness.

When we multiply love and Oneness by the *YHVH* (????) we get $(13 \times 26) = (156 + 182)$, Joseph and Jacob and the tight bond of fatherly and balanced central column love between them, at the center of the Cosmic Clock. The value **156** associated with Joseph and Zion, the point above Jerusalem at the center of the Cosmic Clock, is the **12th** pronic number, representative of the cycle of time.

The Great Shabbat

When we multiply love and Oneness by the proportional time value, we get $(13 \times 54) = 702$, *Shabbat* (???), the **13th** even pronic number and **26th** overall one, and our connection to *Binah*, a period of time and space beyond the limits of our Spherical Time bubble.

When we add **702** to **5778** as the great Shabbat that will follow the **5778** years of pure physicality, we get: $(5778 + 702) = 6480$, which also equals $(7200 - 720)$.

The value **6480** is far from an isolated number. The precession of **25,920** years is divided into **12** constellations with an arc of **2160** years each, one Moon diameter. At **3.333...** seconds per year, this is equivalent to $(2160/3.333...)$ or **648.064806480...** parts of a minute per **1/12th** period. Conversely, the Moon’s diameter is $1/3^{\text{rd}}$ of **6480**. This is also $(2160 \times 3.333...)$ = **7200.0** seconds per **1/12th** period.

In an earlier chapter we discussed the value **6480** in terms of the total words, letters, verses, rows, and columns in the Torah. We began with the simple number theory application of the sum of the digits in the equation (**401273 – 390625**) that gave us **42**. Next, we saw the P/S gematria cipher of **390,625** was **1620/25 = 64.8**, while the P/S of (**390,625** and **401,273**) together is **272160/42 = 6480**, or exactly **100** times the result of previous equation. This resultant **6480** is also the **80th** pronic number: **80 x 81**, the same **80** associated with *Binah* in multiple ways and in the (**80,000 – 25**) words in the Torah.

Moreover, the cube root of the product of the digits in (**390,625** and **401,273**) or **272160** is **64.80...** while the product of the digits in the resultant **272160** is **4 x 42**.

Furthermore, the value **6480 = 120 x 54**, the age of Man times the annual cycle of the Torah.

$$\frac{4 \times 1 \times 2 \times 7 \times 3 \times 3 \times 9 \times 6 \times 2 \times 5}{4 + 0 + 1 + 2 + 7 + 3 + 3 + 9 + 0 + 6 + 2 + 5} = \frac{272160}{42} = 6480 = 80 \times 81$$

$$\frac{4 \times 1 \times 2 \times 7 \times 3 \times 3 \times 9 \times 6 \times 2 \times 5}{4 + 0 + 1 + 2 + 7 + 3 + 3 + 9 + 0 + 6 + 2 + 5} = \frac{272160}{42} = 6480$$

$$\sqrt[3]{272160} = 64.80 \dots$$

$$\frac{3 \times 9 \times 6 \times 2 \times 5}{3 + 9 + 0 + 6 + 2 + 5} = 64.80$$

$$64.80 \times 100 = 6480$$

$$401,273 - 390,625 = 22^3$$

$$22^3 = 10,648$$

$$10 \times 648 = 6480$$

Some may look at the **272160/42** equation and see references to the **72** Triplets (Names) and **216** letters in them with the **42**-Letter Name and others may see a reference to the Moon's **2160** miles diameter. Either way, or both ways, for that matter the total quantitative aspects of the Torah are pointing to the Great Shabbat because it is through the understanding of the Torah's technology that we will bring about the Great Shabbat, the *Geulah*.

The Torah was designed to get us there. It is up to us to figure it out.

For anyone that has not been following this series from its inception, you can find the [entire work here](#).
