
The Secrets of Light from the Summit of Stone

Author : Meiliken

Date : 23-11-2009

Taking it slow, let's examine a little closer only one aspect of Joseph's Pyramid (the Great Pyramid), its glimmering capstone. Its full (missing) capstone is **7** levels high, stretching from the **203rd** level to the tip of the **210th**, completing the tip the sword (*ChRB*), whose numerical value in Hebrew is **210**, just like that of "the mountain (*HHR*)."

And while it is well know that the end of the first exile occurred after **210** years in Egypt the Zohar informs us in Pasha Toldot, (Midrash Hane'elam) Section 8, #71 that in regards to the resurrection the righteous will rise up **210** years before everyone else. With the pyramid, we have that figure preserved in stone.

It's interesting that the capstone was mysteriously removed long long ago, because, now, if you'd look straight down over the top of the pyramid you'd see a square **32** feet by **32** feet in the exact middle of it, just as you would if you did the same with the Holy Temple. The square central alter in the center, or heart, of the Future Holy Temple is **32** cubits by **32** cubits.

As we've said previously, this makes sense since **32** is the numerical value for the Hebrew word for heart (*LB*), representing the **32** Paths of Wisdom, which form the Tree-of-life.

And since the Torah begins and ends with the letters *Lamed (L)* and *Bet(B)* as in *LB* (heart), and since there are exactly **32 x 32** word values in the Torah, which is also **2¹⁰**, analogous to the **210** levels, this structure makes perfect sense from a holistic and comprehensive divine point of view.

And as light flows down from the apex, cascading down the **4** steep highly polished sides of the pyramid, so too did the light (water) flow down the **4** rivers from *Gan Eden (Bereshit 2:10)* and from the Holy of Holies of the Future Temple through the **4** Names (Aspects) of G-d.

The **4** bases of this capstone, like the **4** bases of the pyramid itself, vary slightly, with the average being about **32.0833** feet, **32** and **1/12** feet or exactly **14** cubits, making the height of the capstone **20.42** feet and the apothem just about **26** feet give or take less than half an inch, with **26** being the numerical value of the Tetragrammaton (*YHVH*).

Now there are **201.1** cubits to this **203rd** level, **203** being the numerical value of the Torah's first **3** letters (*BRE*), leaving **7** additional levels to the apex and since **2011** plus **7** equals **2018**, as in **2018 CE**, it matches up with the Hebrew year **5778** dictated by the pyramid's height in inches. But more significantly, and more precisely, the ratio of the height and base of the capstone to the height and base of greater pyramid itself is **4.2424%** giving us **424**, the numerical value of *Mashiach Ben David* (the Messiah).

Yes, this is no coincidence.

Light and Dark

Let's consider the aspect of the "Light" synonymous in Kabbalah with G-d (Hashem) and the structure of Joseph's Pyramid. But first know this: The Zohar, in the paragraph that immediately proceeds the one quoted above regarding the **210** years, Toldot, (Midrash Hane'elam) Section 8, #71 tells us that " 'let there be Light' (Bereshit 1:2) which means let there be secret,

because light is the secret of redemption...” That understood, we know the most basic measurements of the Pyramid are exactly **210** holy cubits for the height and **330** holy cubits for the base. We’re calling them holy cubits because this cubit (**27.5** inches) is the one based on G-d’s name, (**YHVH**) and designated for the Future Temple, as we’ve discussed in our recent articles. Nevertheless, given only **210** and **330** and the **10** dimensional structure of the universe agreed upon by both most modern physicists and the ancient kabbalists, we find that:

$$1/(330 \times 10^2) = 1/33,000 \text{ inches (the exact wavelength for red light)}$$

and

$$1/(210 \times 330) = 1/69300 \text{ inches (the exact wavelength for violet light on the opposite side of the visible light spectrum).}$$

What chance is there that this too is coincidence?

Or that the sum of the base and height in cubits (**330 + 210**) equals **540** and when we add 1 of the *kolel* we get **541**, the numerical value of Israel.

Now, as we’ve explained, the capstone is exactly **14** cubits wide and **14** is the gematria value for David (*DVD*) and *yad* (*YD*), meaning hand, as in the hand of G-d, so how odd is it that **541** cubits is **14, 877.5** inches or **14** with **5778** reversed, the date Rav Yehuda HaLevi Ashlag of blessed memory gave us for the end of the 4th exile. (See The Divine Calendar).

Not to get too technical, but the number **14** is the 3rd square pyramidal number, meaning it takes **14** units to construct a **3** level square pyramid, and the *Magen David*, (the “Shield of David”), is a perfect symmetrical 12-gonal star, indicating these numbers spiritually were chosen not by simple mathematical chance, but for the esthetics in their geometric symmetry and how their energy unfolds in our world.

Moreover, **541** is the 10th centered 12-gonal number, a fancy way of saying a symmetrical **12**-sided polygon made up of **541** geometric units, and given Jacob’s (Israel’s) **12** sons as heads of the **12** tribes of Israel, it’s not an insignificant construction or consideration. There is nothing in the universe that does not have a specific purpose.

That all said, the square root of the **541** cubits in feet is **35.210** and while **35** is exactly **1/6th** the pyramid’s height of **210** cubits, the **35th** level of the pyramid is a big delineation point in its structure.

At the **35th** level, the height of the masonry is purposefully twice that of the average and surrounding layers, making it stand-out like a wide stripe or band around the pyramid. Being that it’s exactly **1/6th** the way up the structure, it’s therefore also **5/6th** the way down, indicating a possible construction analogous to the **6 sefirot** (dimensions) of *Zeir Anpin*. Furthermore, this **35th** level just happens to be exactly 50 inches thick (high), which is yet another allusion to *Binah* and the 50-year jubilee period. (see our previous article: Mountain of Stone).

Moreover, the **35th** level up is necessarily the 175th down, corresponding to the **175** years of Abraham’s life, the first of the Patriarchs to visit Egypt.

So once again we ask the questions: Who built the pyramid in Egypt and why?

We can plainly see that the structure itself is all about light and elevation and the end of exile (all four of them), and the Biblical word for Egypt, *Mizraim*, is synonymous with darkness, so obviously the pyramid wasn’t created by elements of darkness. Moreover, it obviously served as a beacon of light amongst the darkness, figuratively, and literally with its highly polished gleaming sides, so perhaps we intuitively know *why* it was built there. It would even look like a flaming sword, but more on that later.

By cloaking it in a veil of darkness, is it possible that G-d tricked the forces of evil and gave us a

lasting testament to His Glory (*Kavod*-numerical value 32) that survived the four exiles mostly intact. You can decide for yourself *who* built it then.

And let's keep in mind that our goal in examining the existing great Pyramid is to better understand and prepare ourselves for the Future Temple and the Tree-of-Life reality for the Zohar in the same section quoted above tells us the Future Temple will precede the *geula* (final redemption) and that doesn't give us a lot of time to prepare.

In our next article we explore the secret entrance to the pyramid and the mysteries that it holds.
